Wednesday 24 October 2018

# Outline of the talk

A { → Science objectives  
→ Origins of the Project

B { → The sample  
→ Summary of the observations

C { → Results  
→ Future work

# **Science objectives**

- (1) Frequency of planets orbiting stars with wide substellar companions ?**
  
- (2) Do wide companions to planet host stars influence their properties (eccentricity, inclination) ?**
  
- (3) To what degree wide companions influence the properties of Jupiter-type planets ?**

# Origins of the project

37 targets

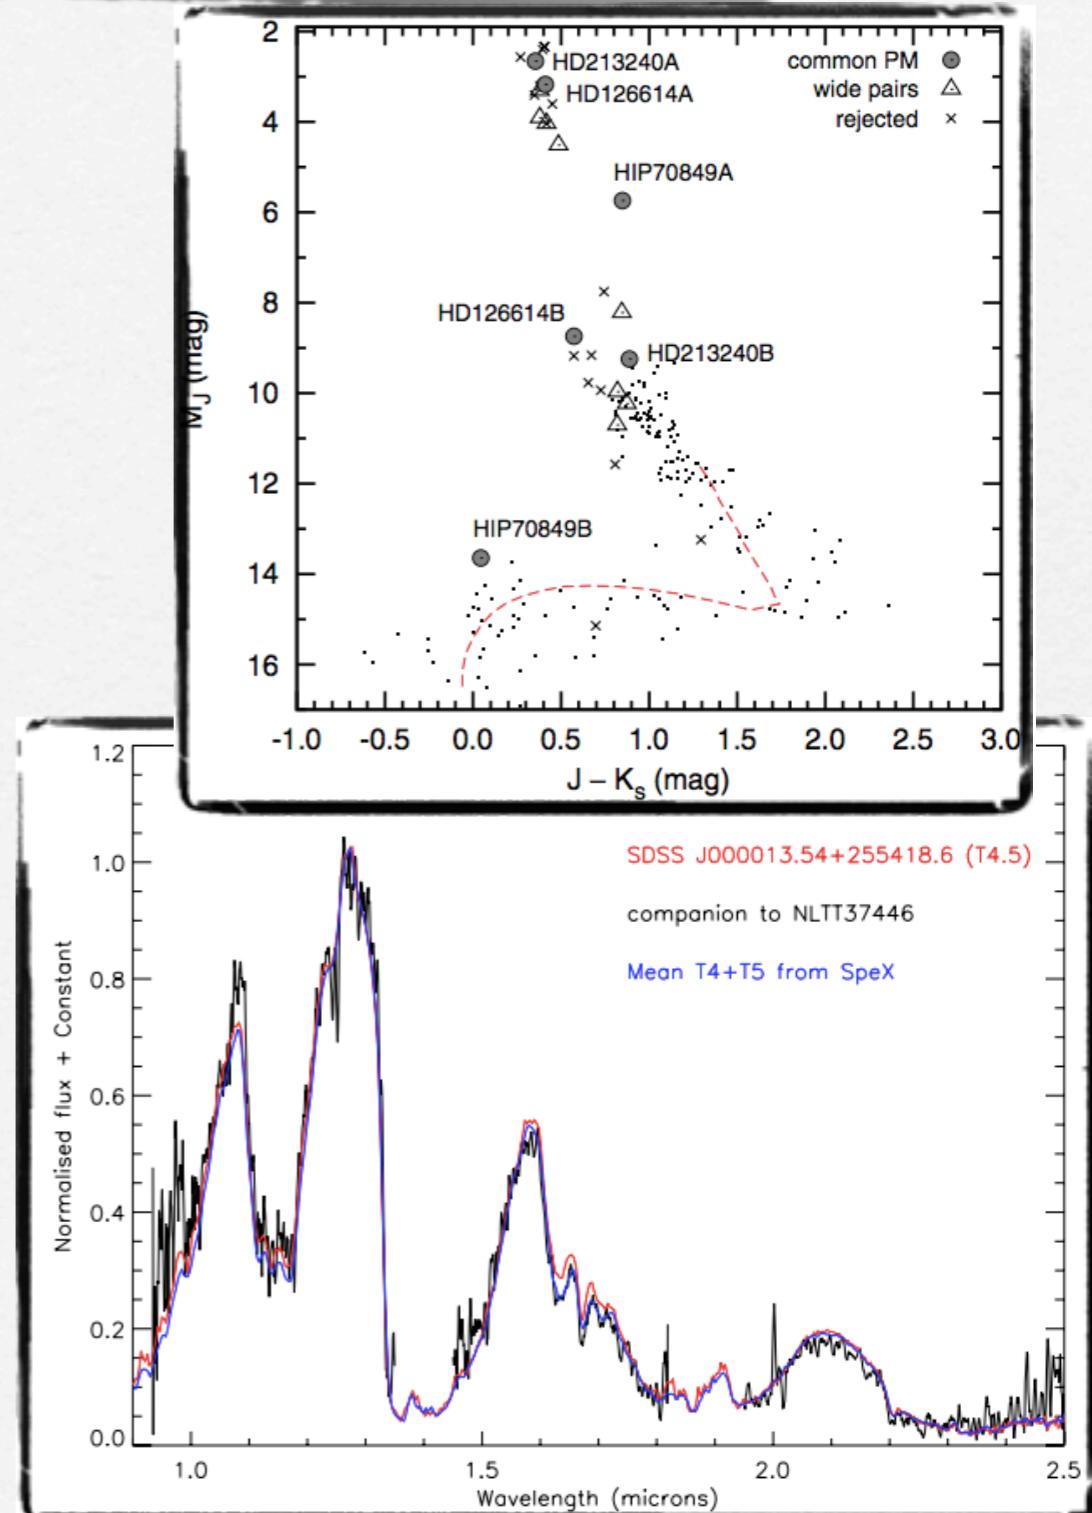

6200 sq deg

HIP70849 K7V  
9 M<sub>jup</sub> planet and  
wide T companion

Frequencies:  
=> Stellar: 5.4+/-3.8%  
=> BD: 2.7+/-2.7%

Lodieu et al. 2014, A&A, 120, 14

## The sample

**Bright:  $V \leq 6$  mag**

HD3651 (K0V)

HD46588 (F7V)

GJ504 (K4V)

HN Peg (G0V)

**Faint:  $V = 8.43$  mag**

HD203030 (G8V)

**Q: how many stars with wide BD companions host planets ?**

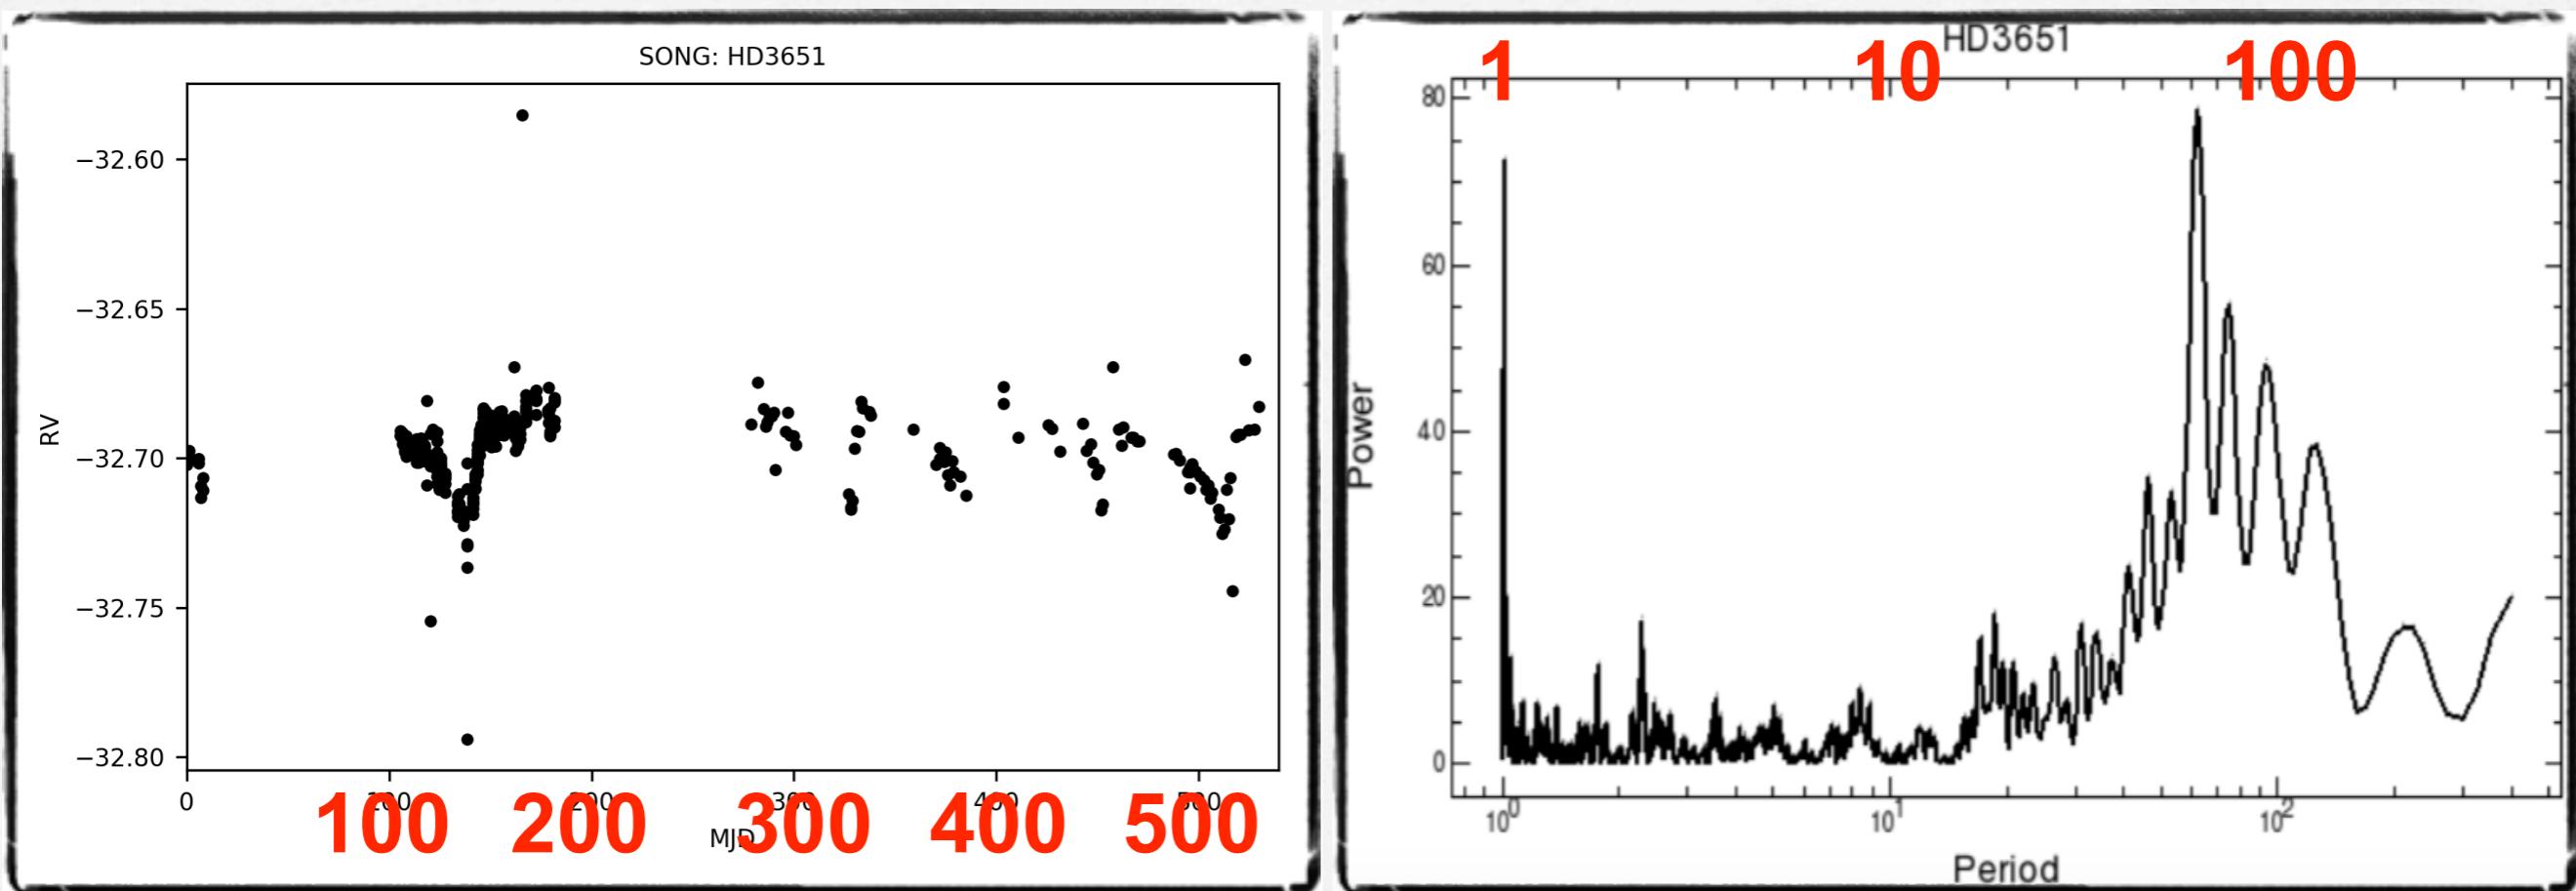

# Summary of observations

Spectroscopy with Th-Ar, slit = 1.2", resolution 90,000

Name	V mag	Expt	Epochs	Baseline
HD3651	5.88	420s	420	03 September 2014 to 14 February 2016
HD46588	5.45	900s	352	03 April 2015 to 06 March 2017
GJ504	5.81	600s	262	07 January 2016 to 19 August 2017
HN Peg	5.95	900s	250	22 April 2015 to 15 January 2017
HD203030	8.43	1800s	112	17 April 2017 to 29 September 2018

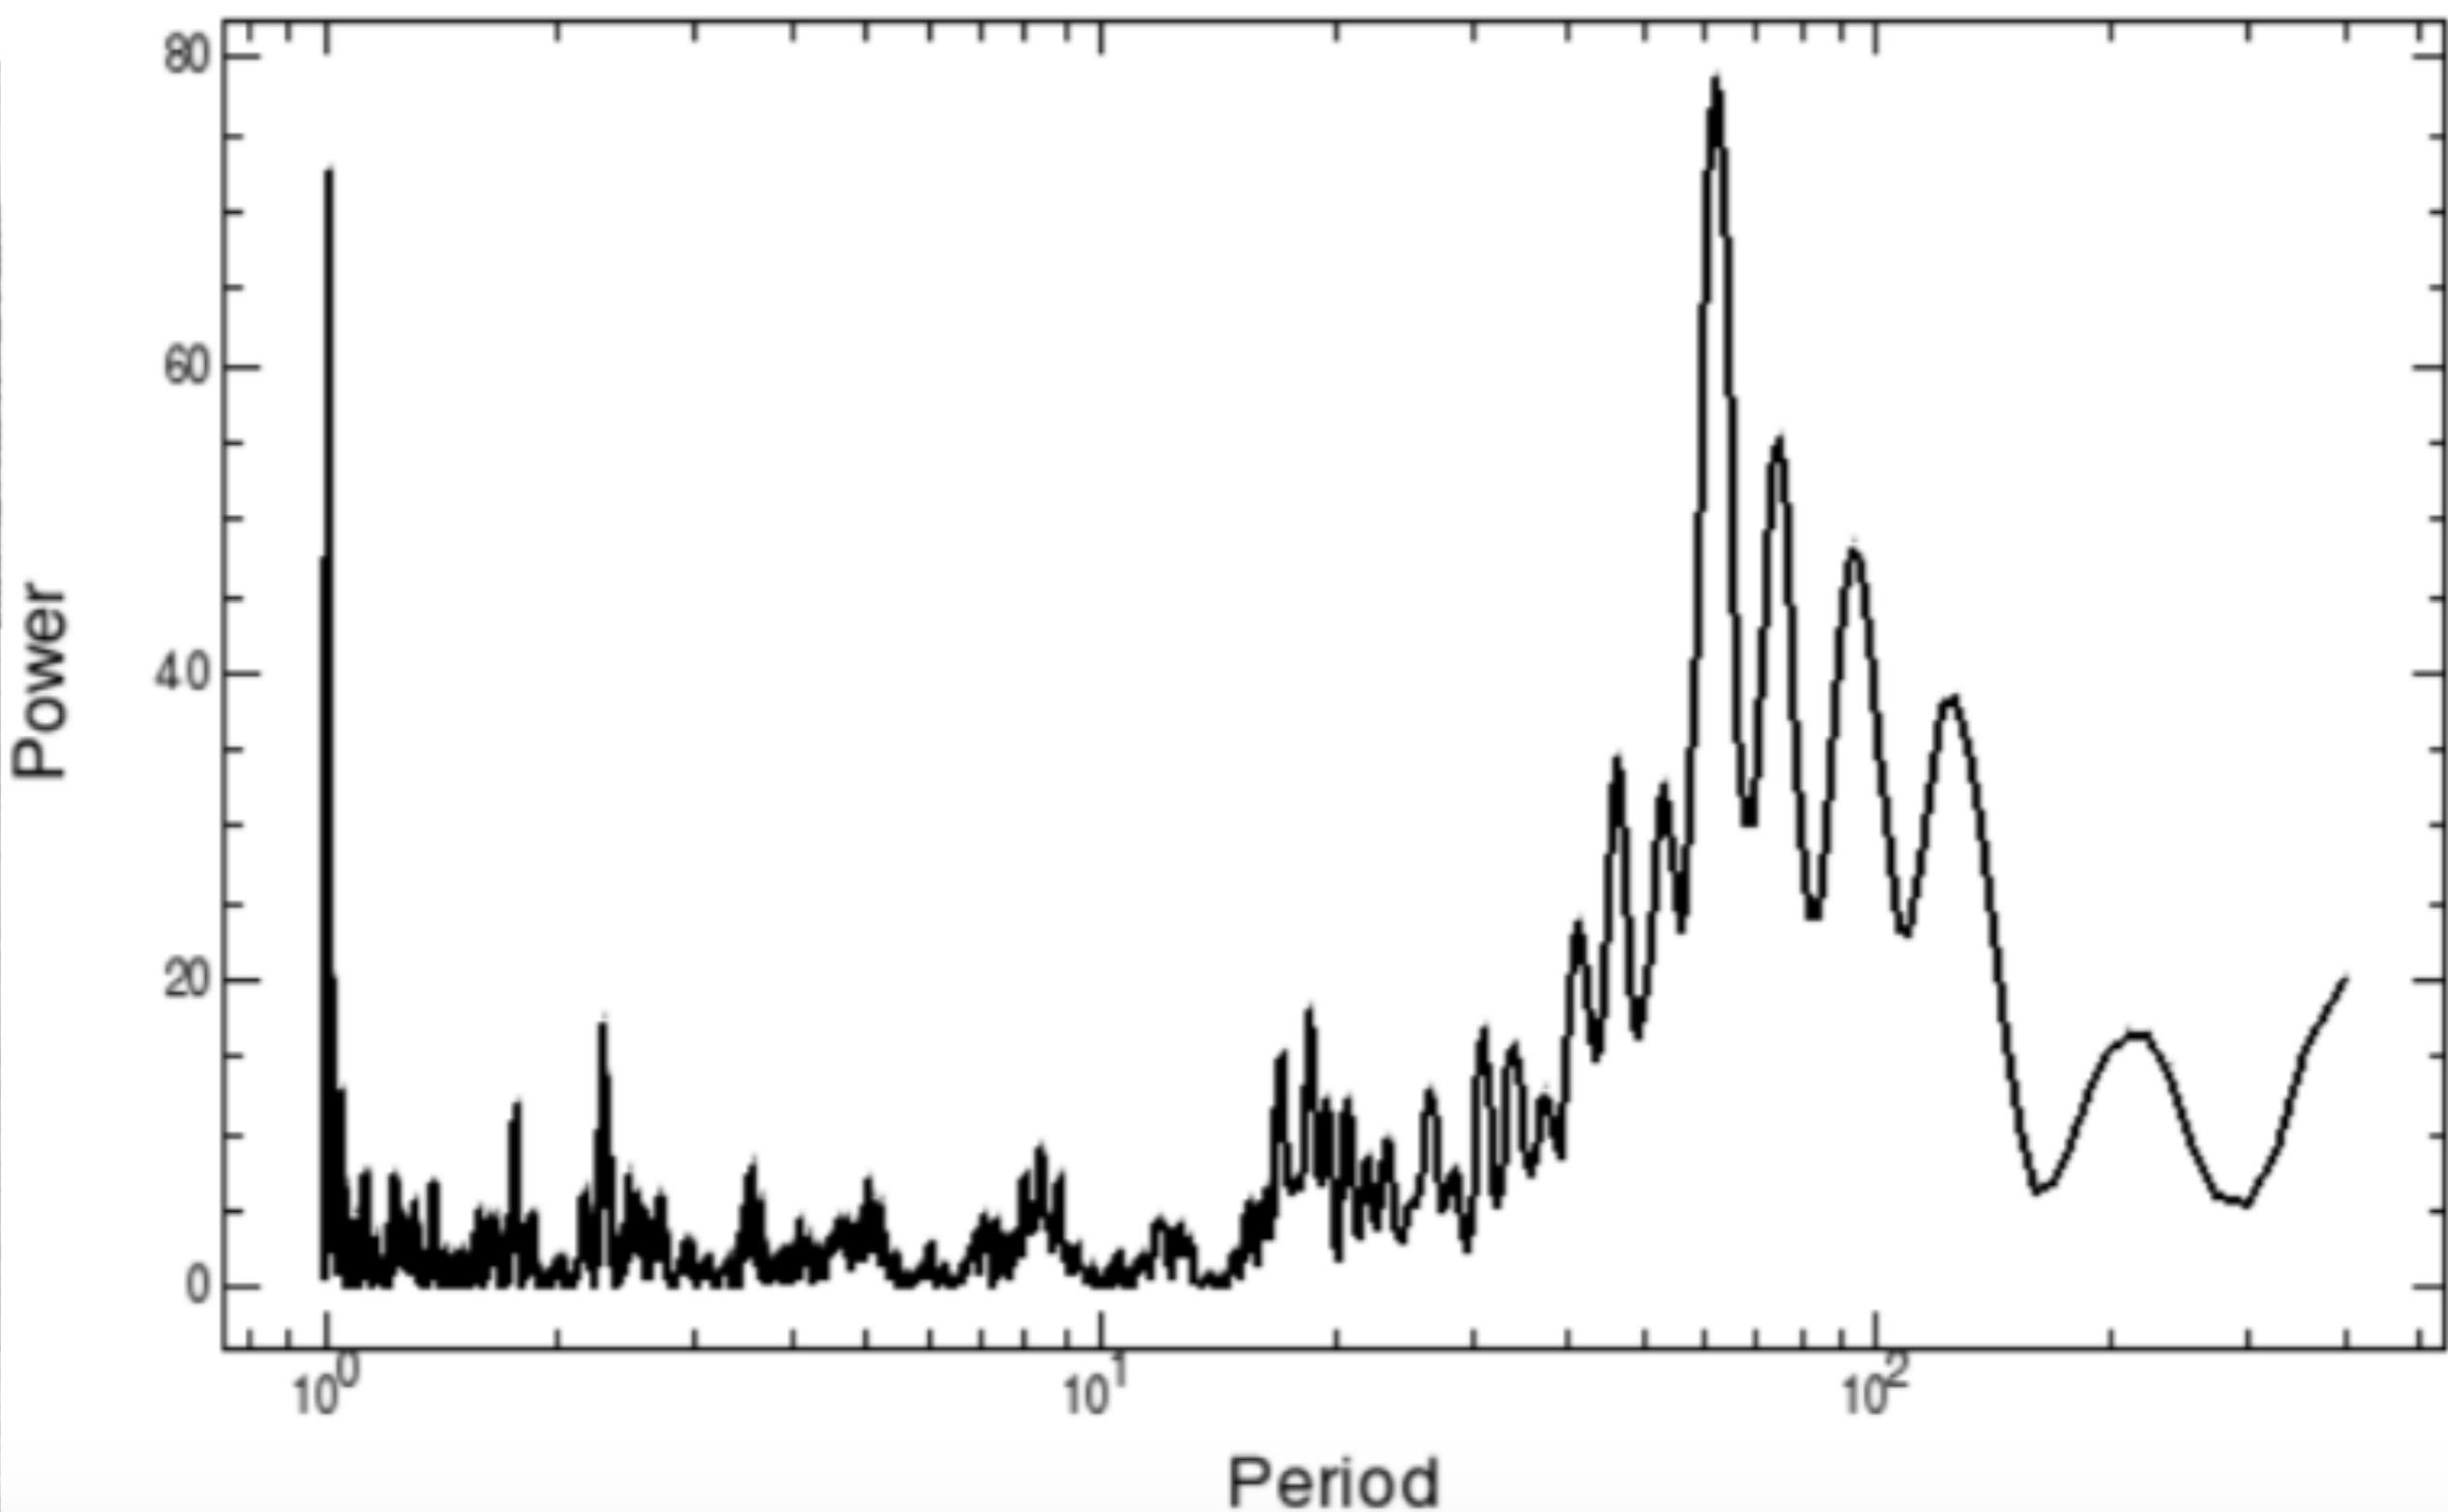

# HD3651

**SpT = K0V @ 11.1 pc   Sep = 480 au   SpT companion = T7.5**

*Mugrauer+2016; Liu+2007; Leggett+2017; Burgasser+2017*

HD3651

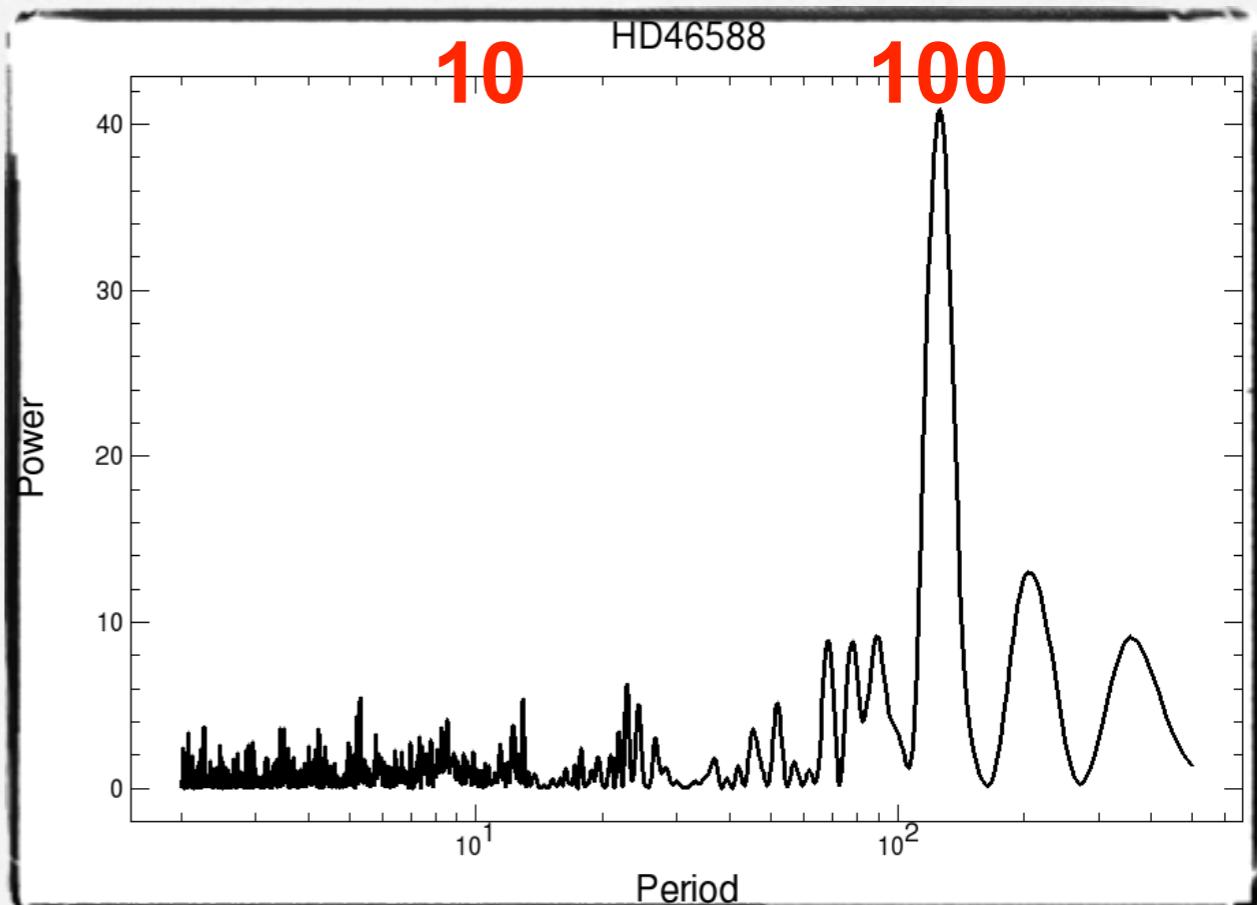

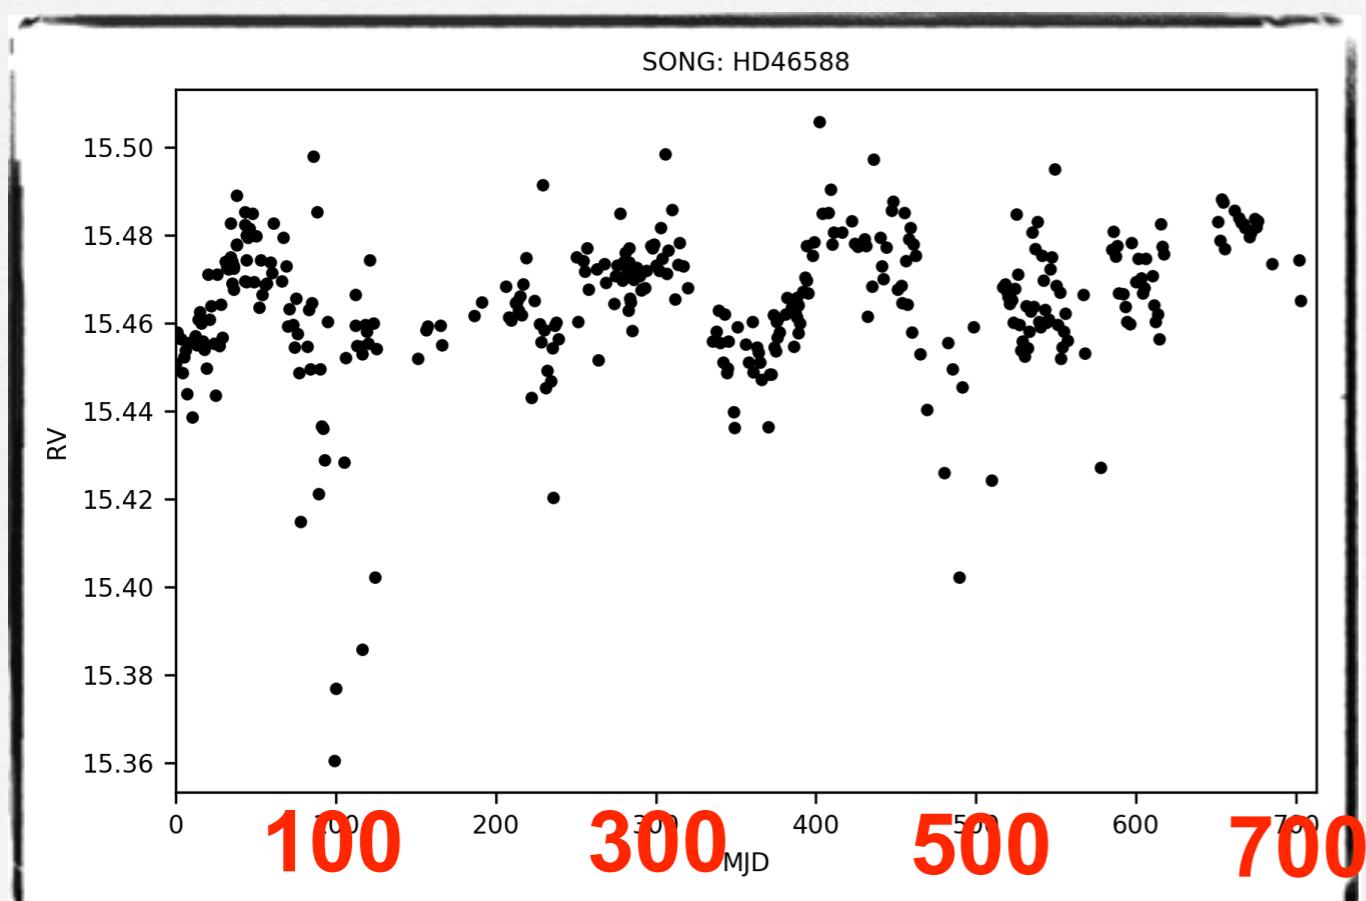

# HD46588

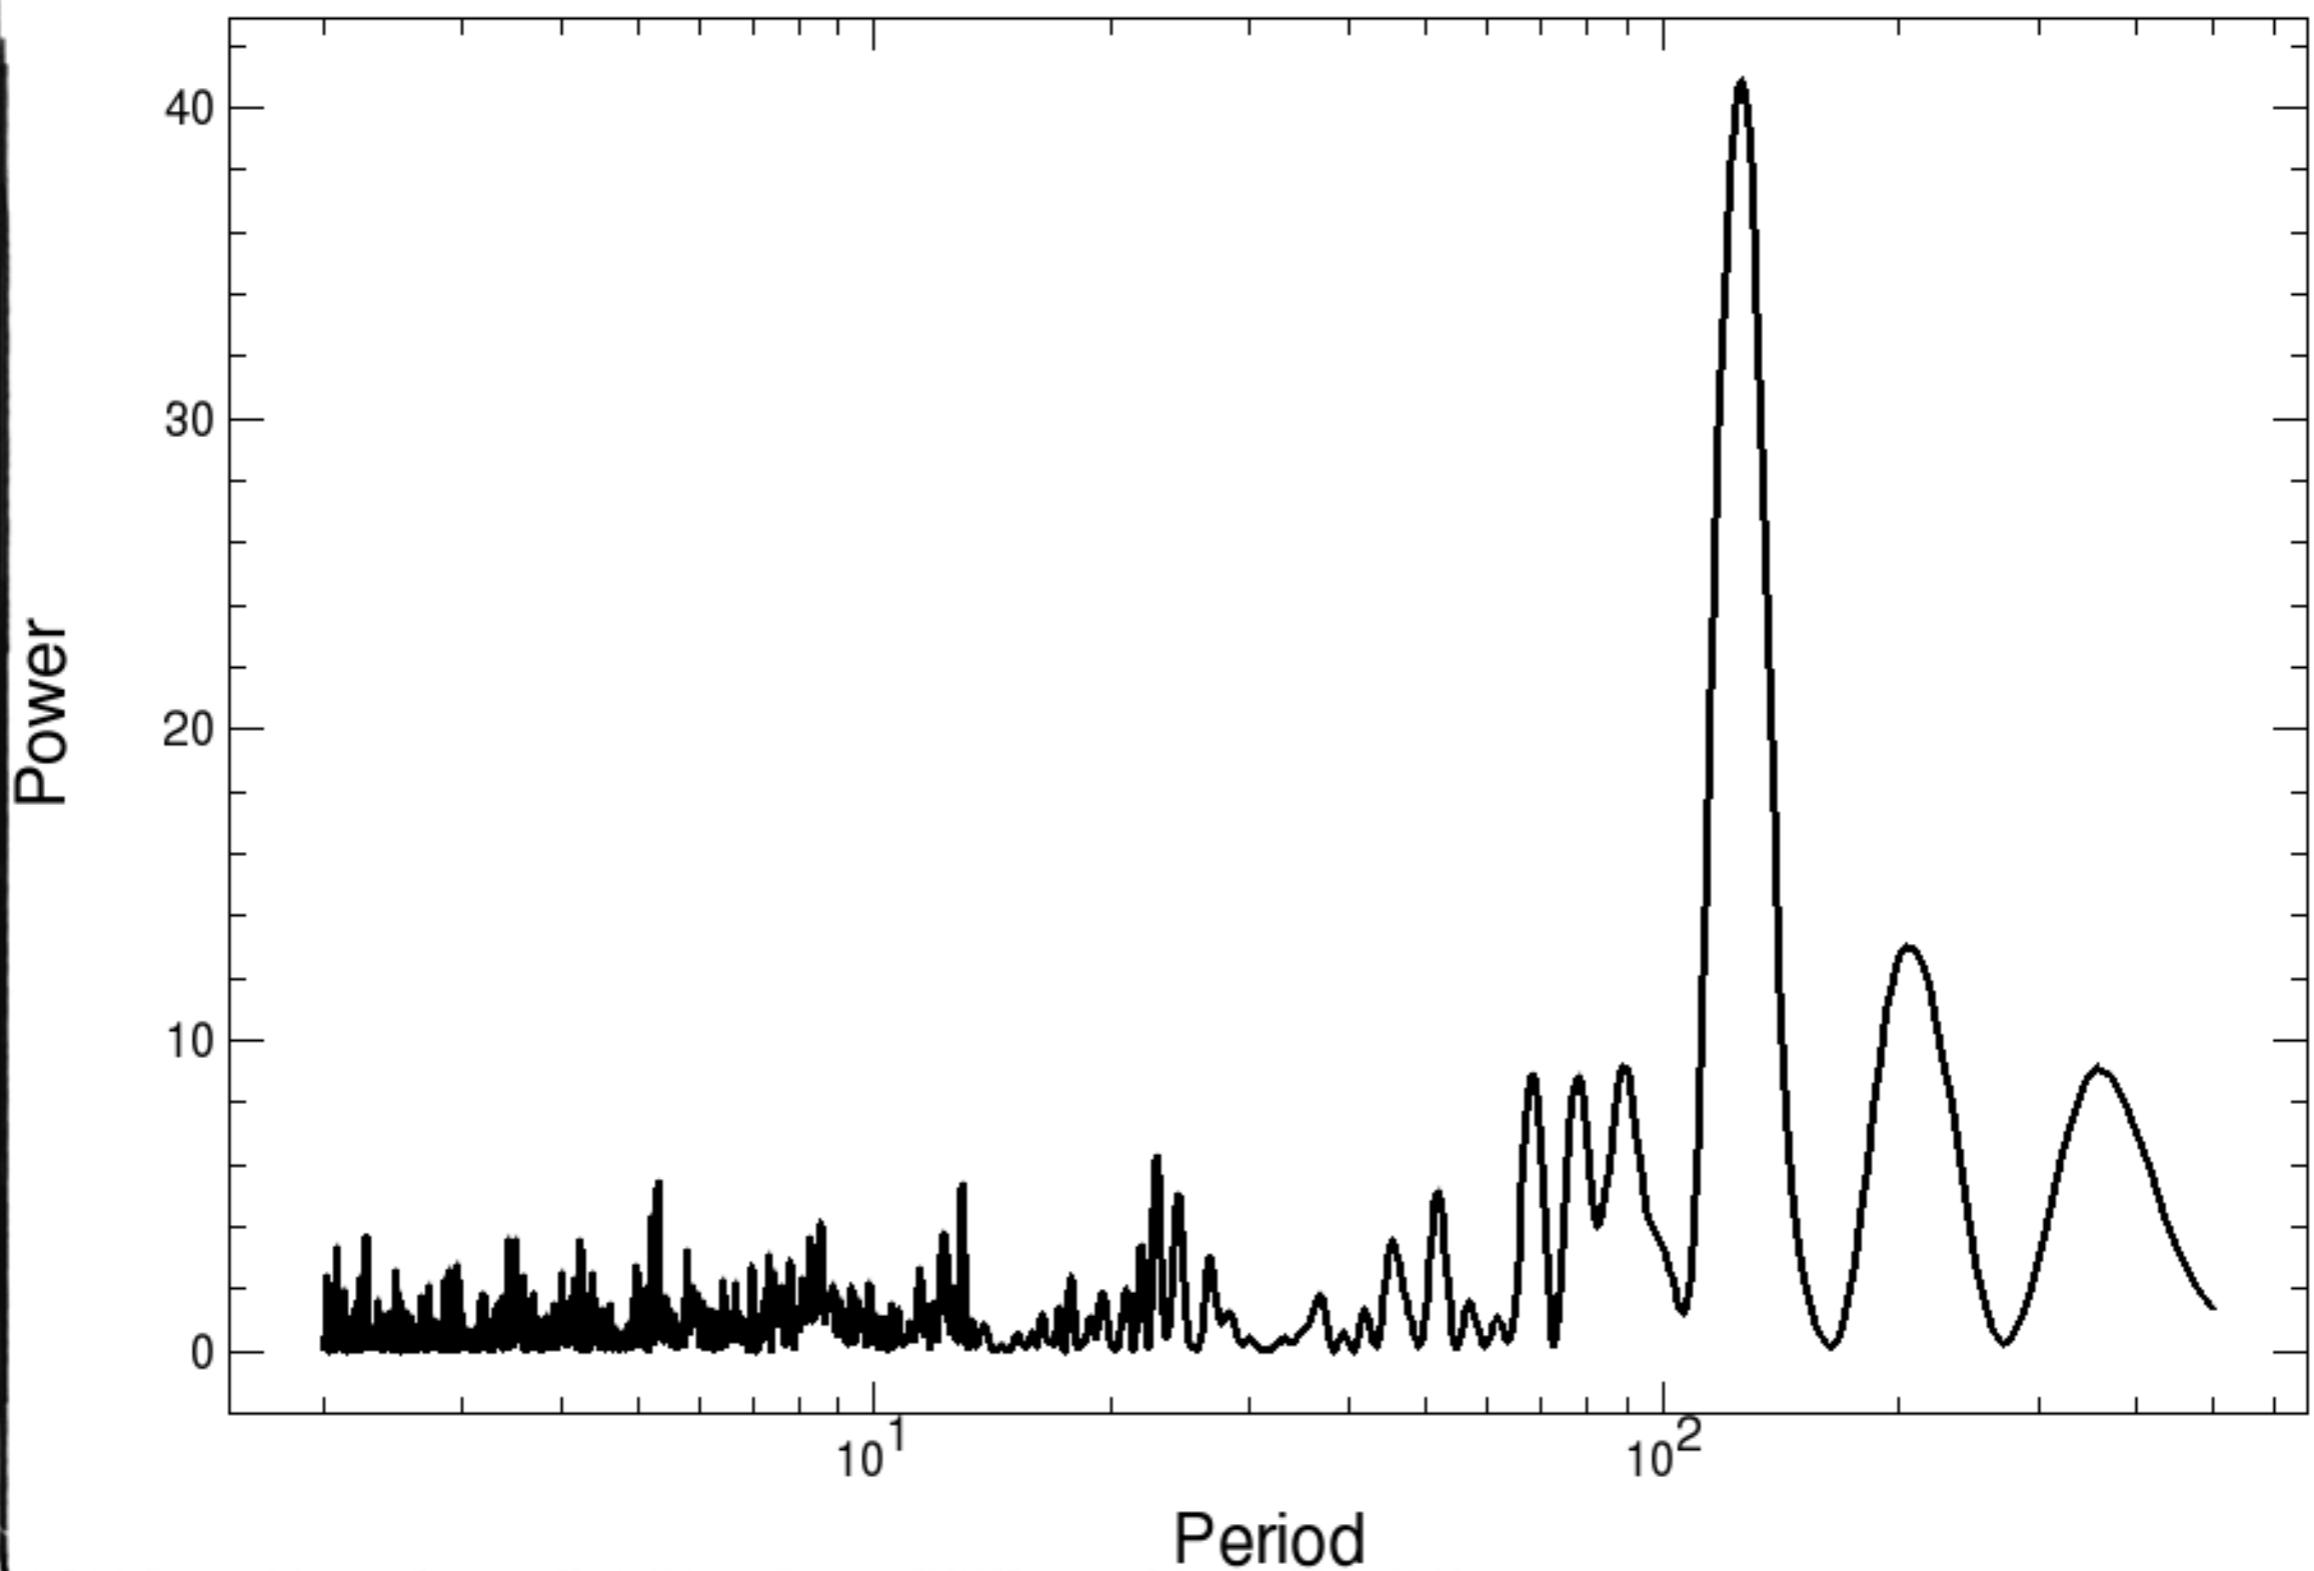

SpT = F7V @ 17.9 pc

Sep = 1420 au

SpT companion = L9

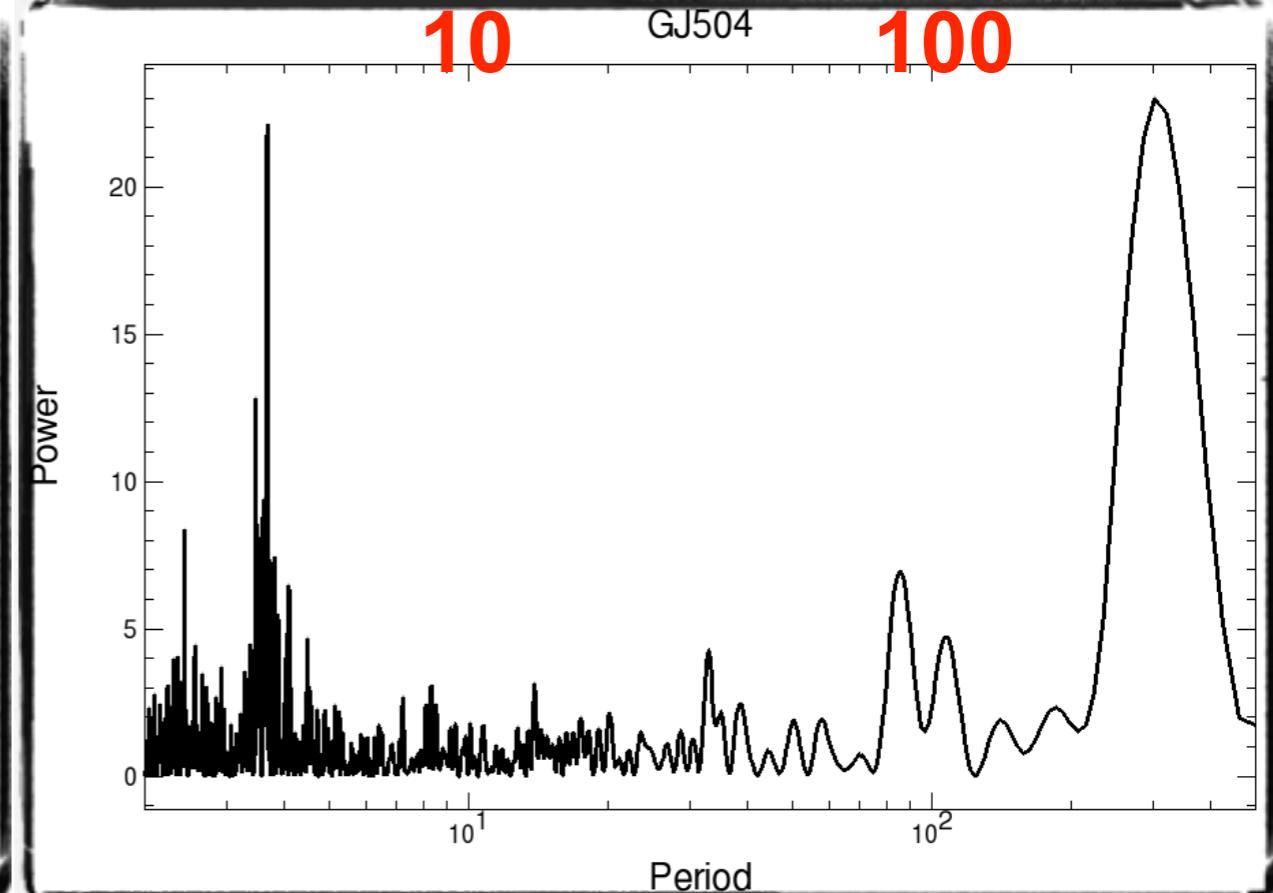

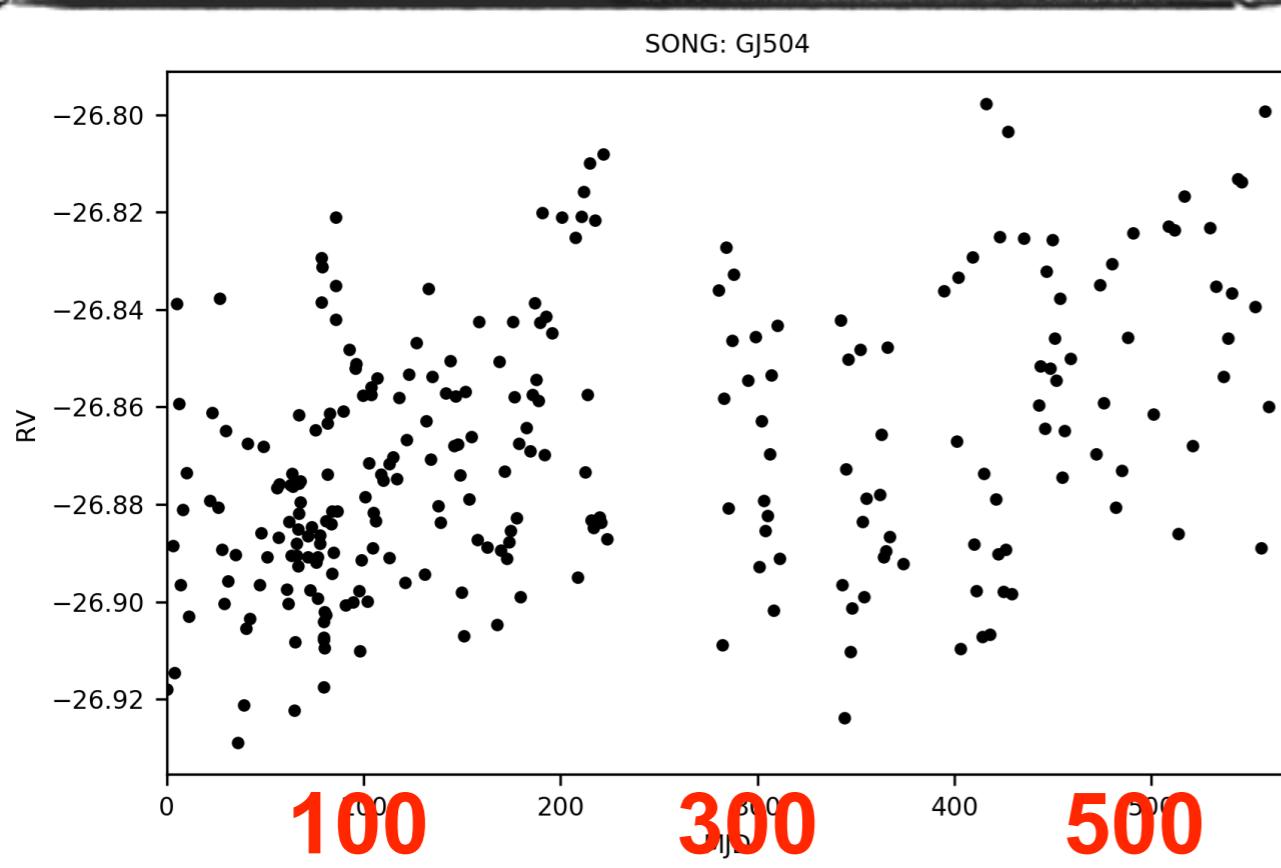

HD46588

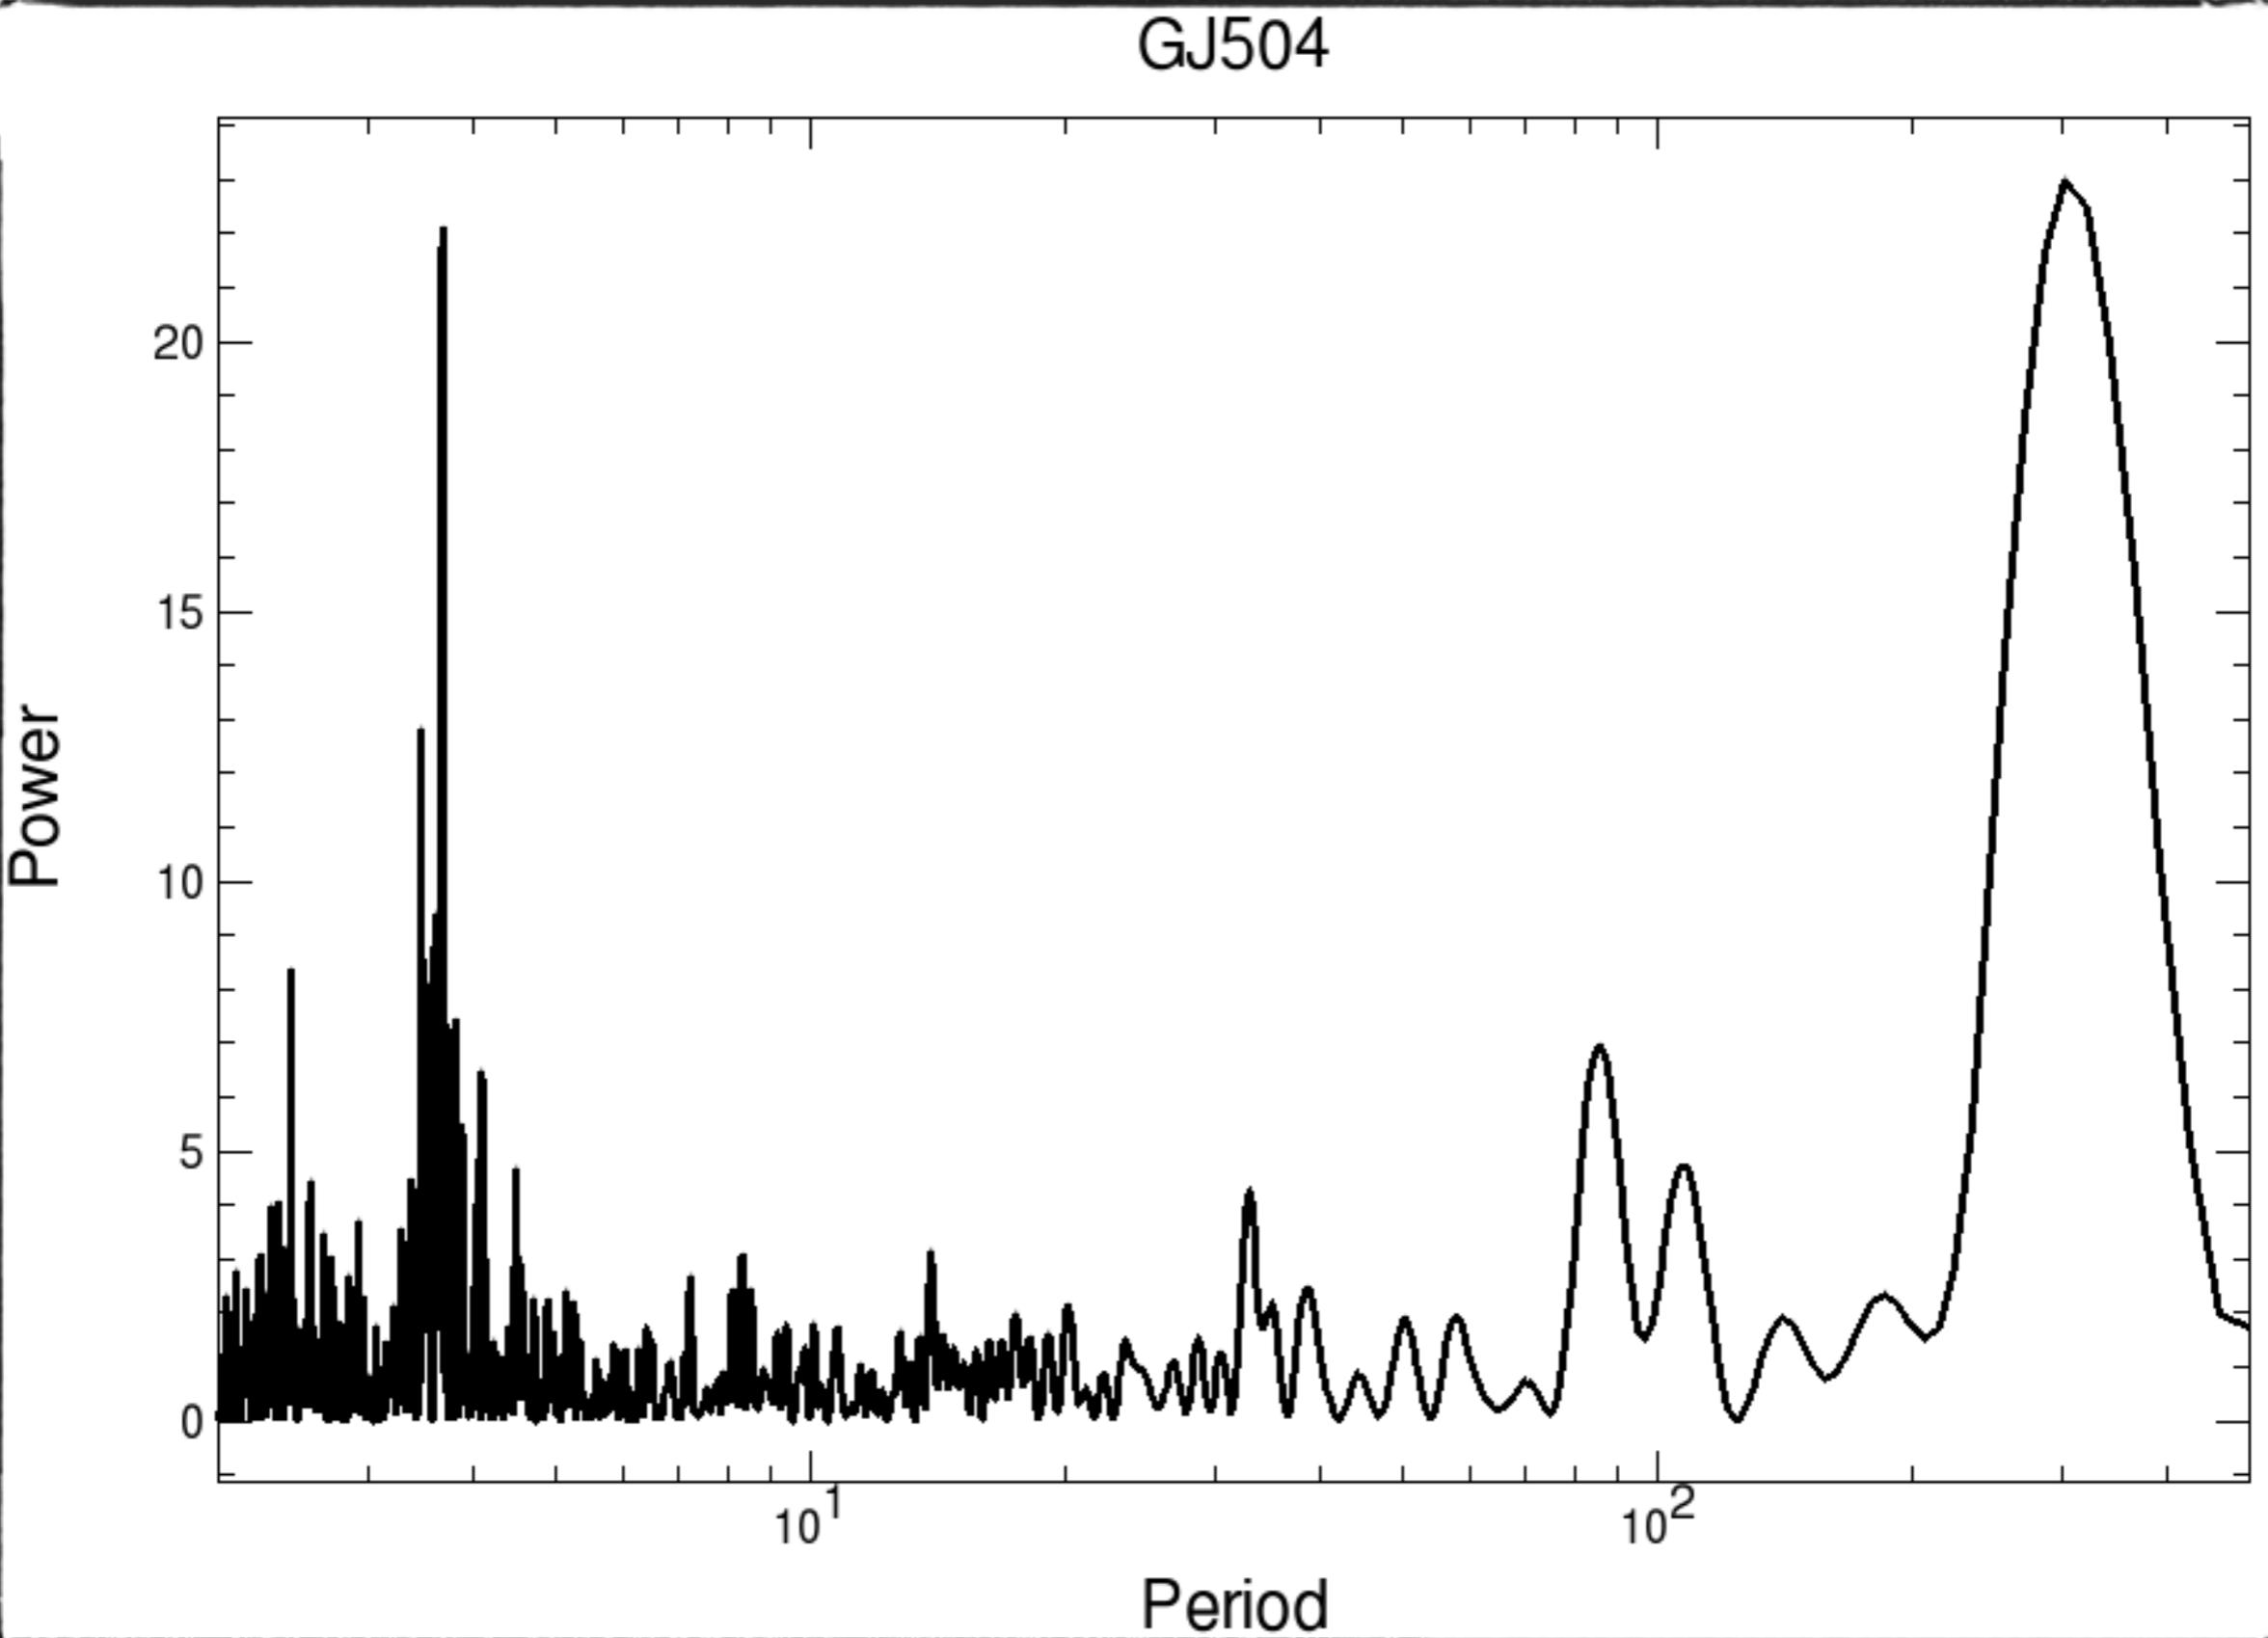

# GJ504

**SpT = G0V @ 17.6 pc    Sep = 43.5 au    SpT companion = late-T**

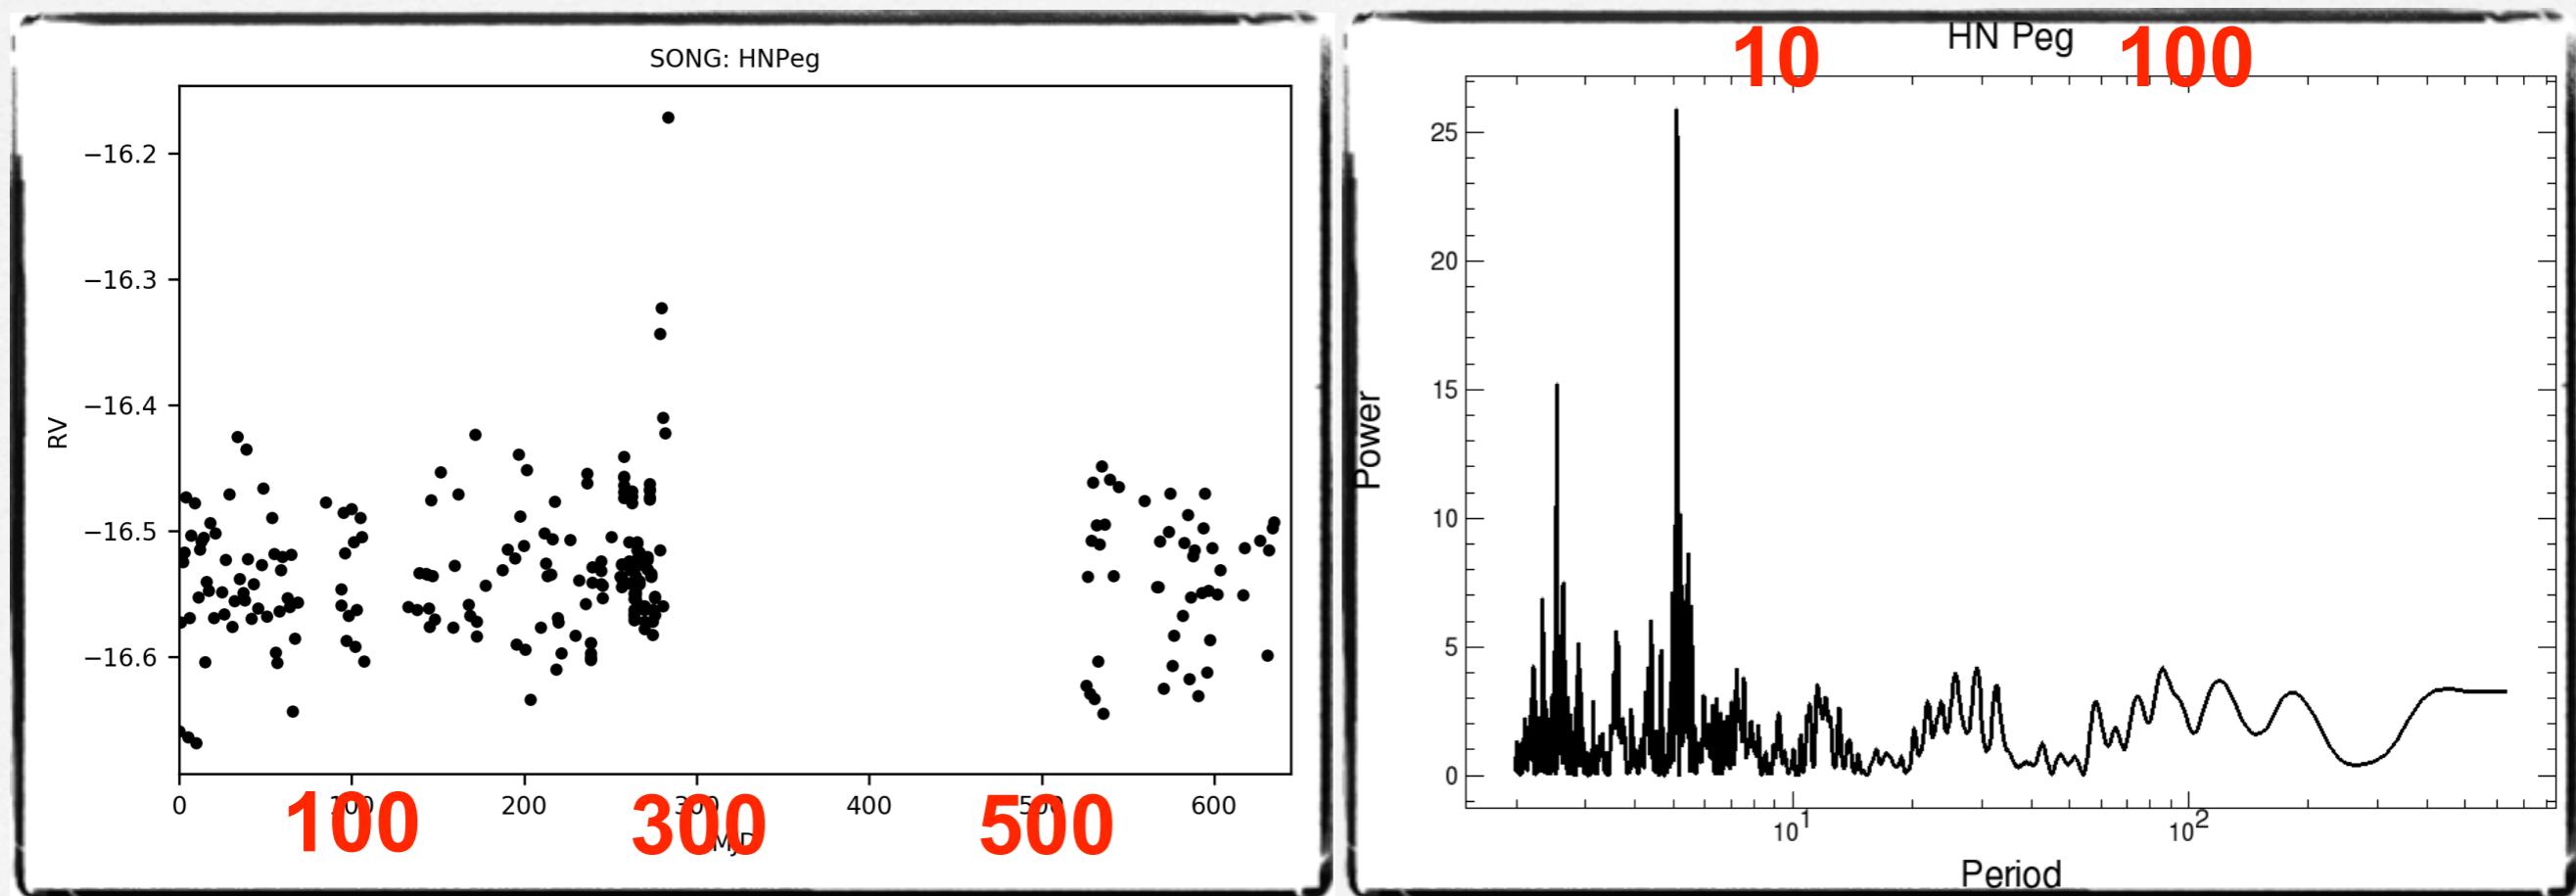

Kuzuhara+2013; Janson+2014; Skemer+2016

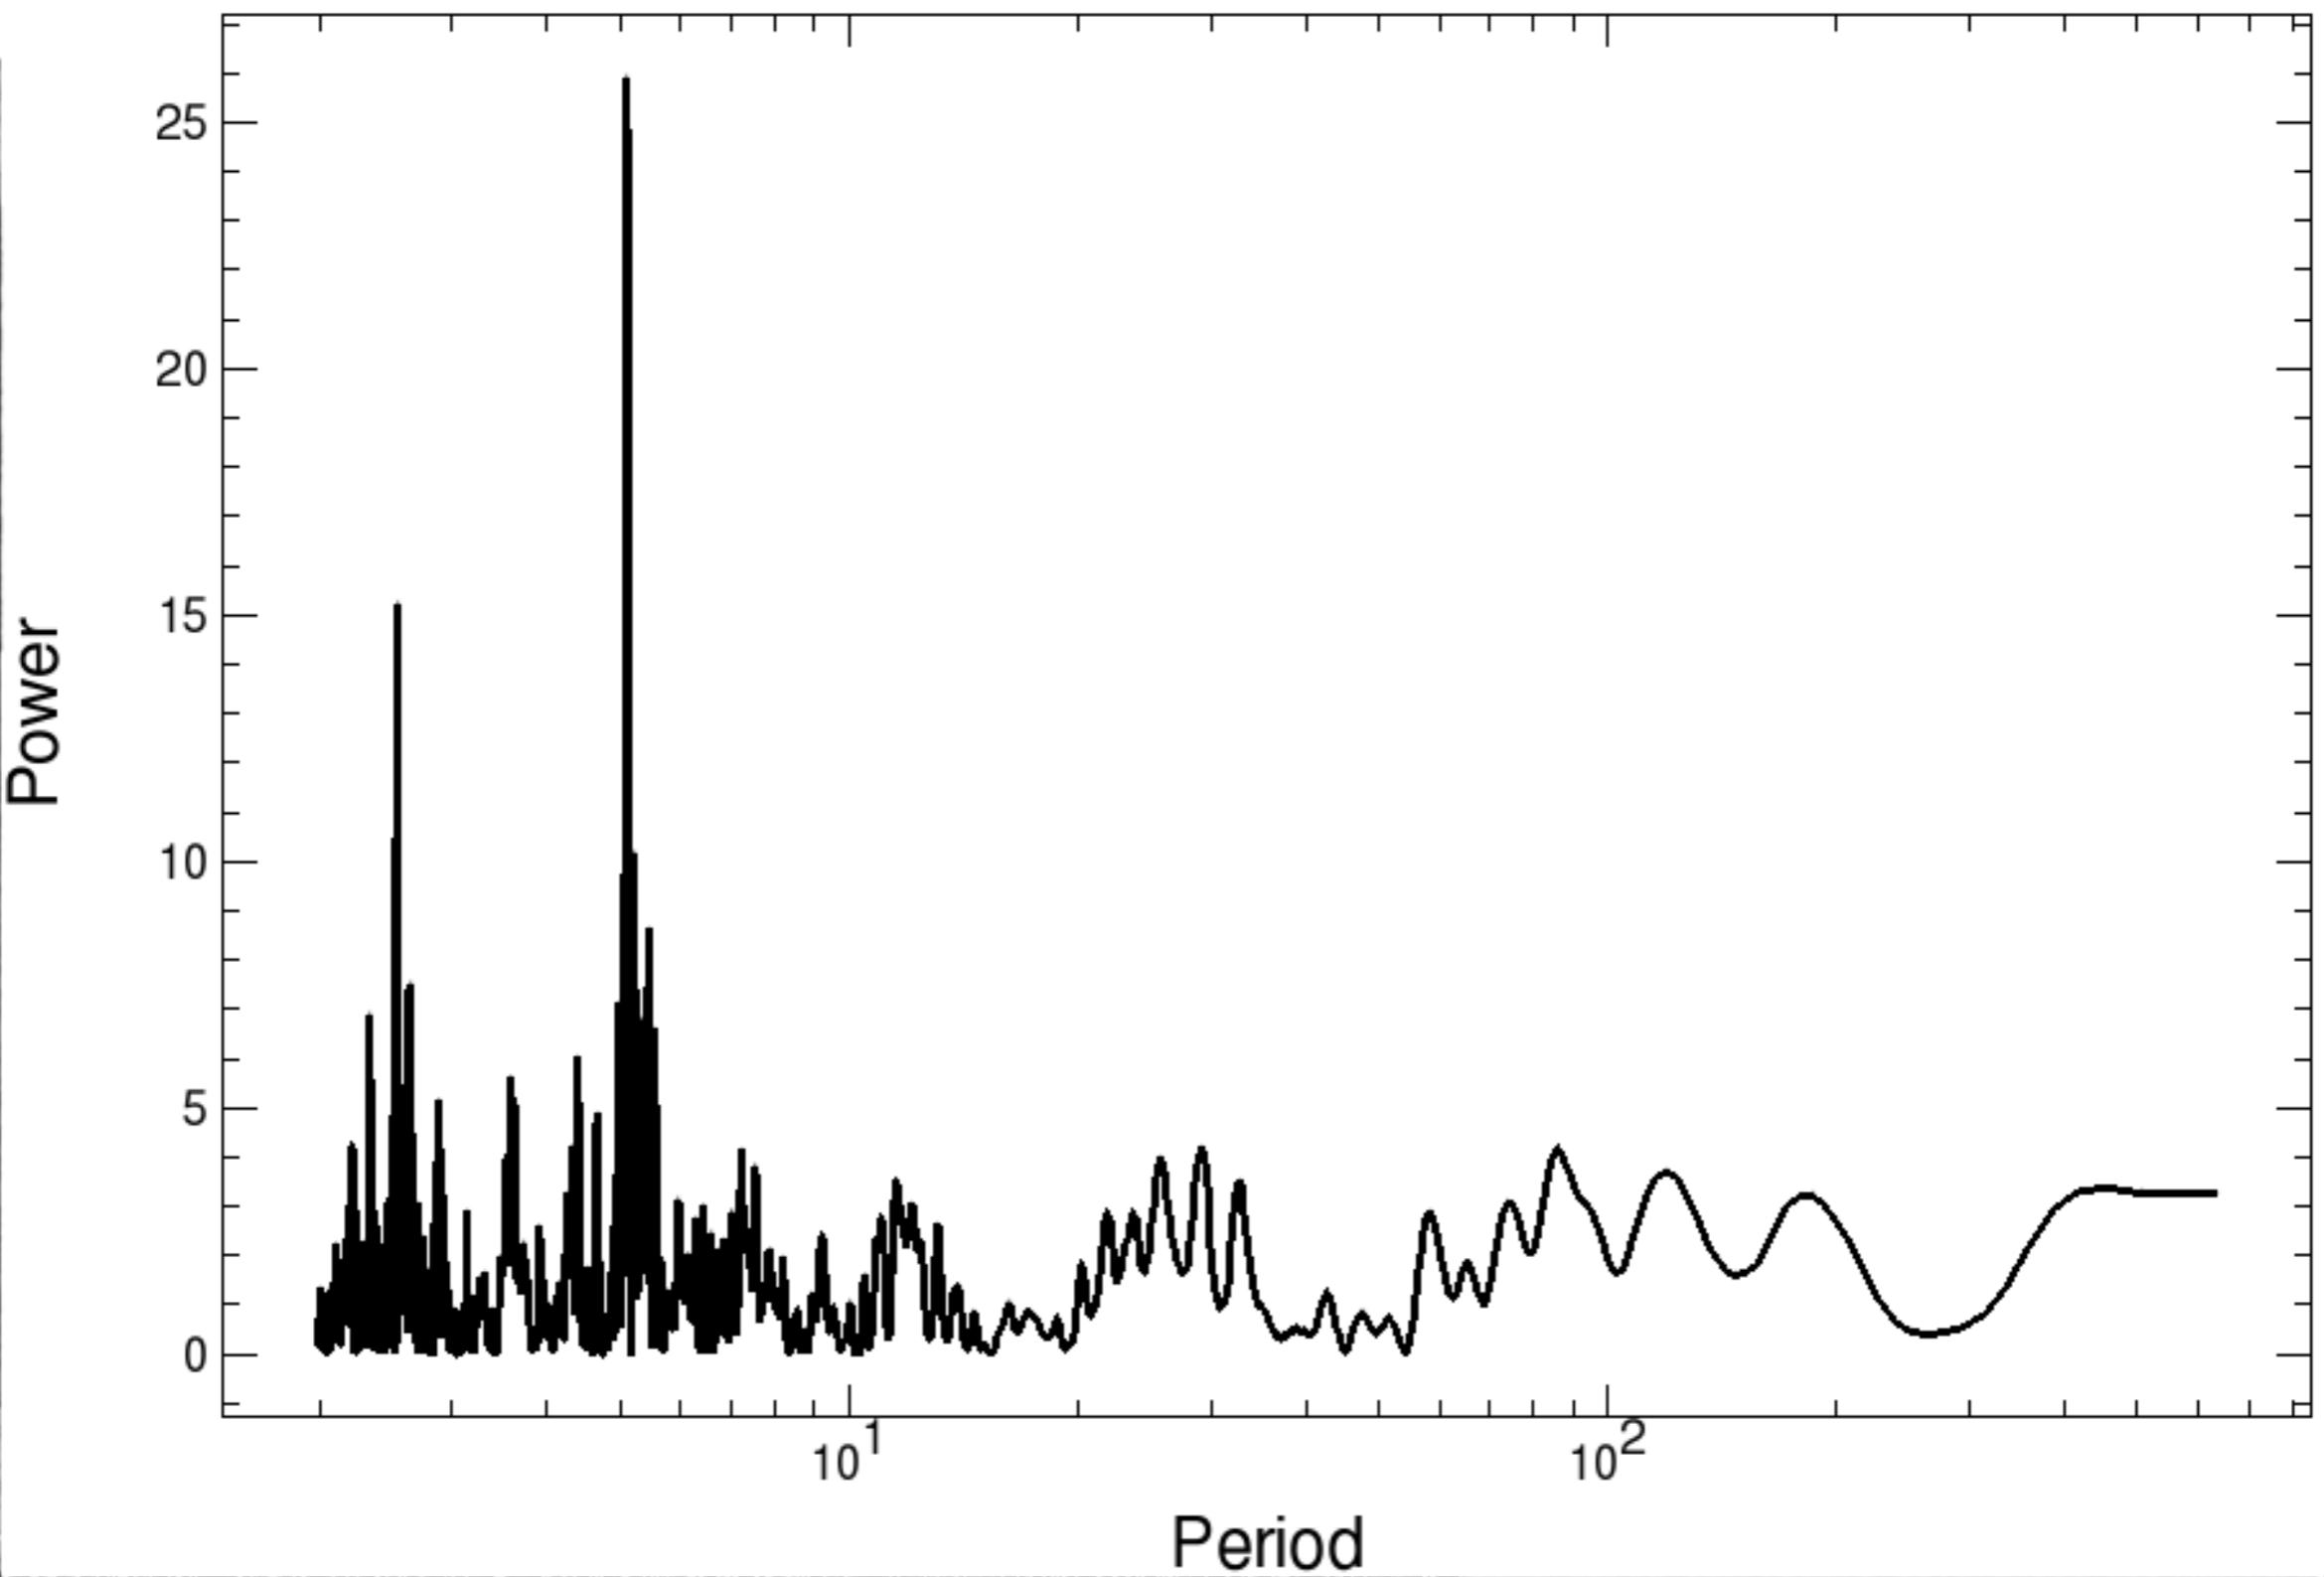

# HN Peg

SpT = G0V @ 18.4 pc   Sep = 795 au   SpT companion = T2.5

Luhman+2007

HN Peg

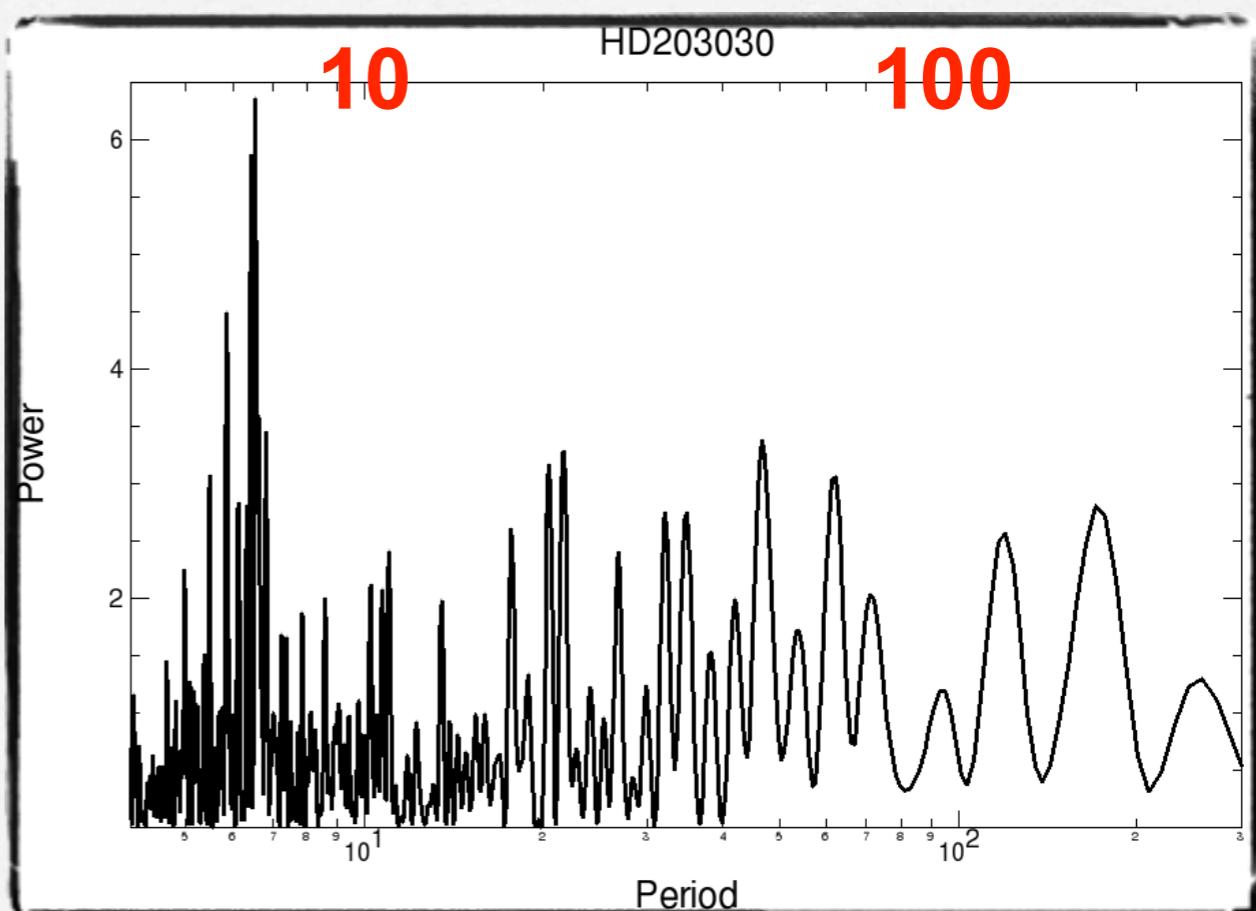

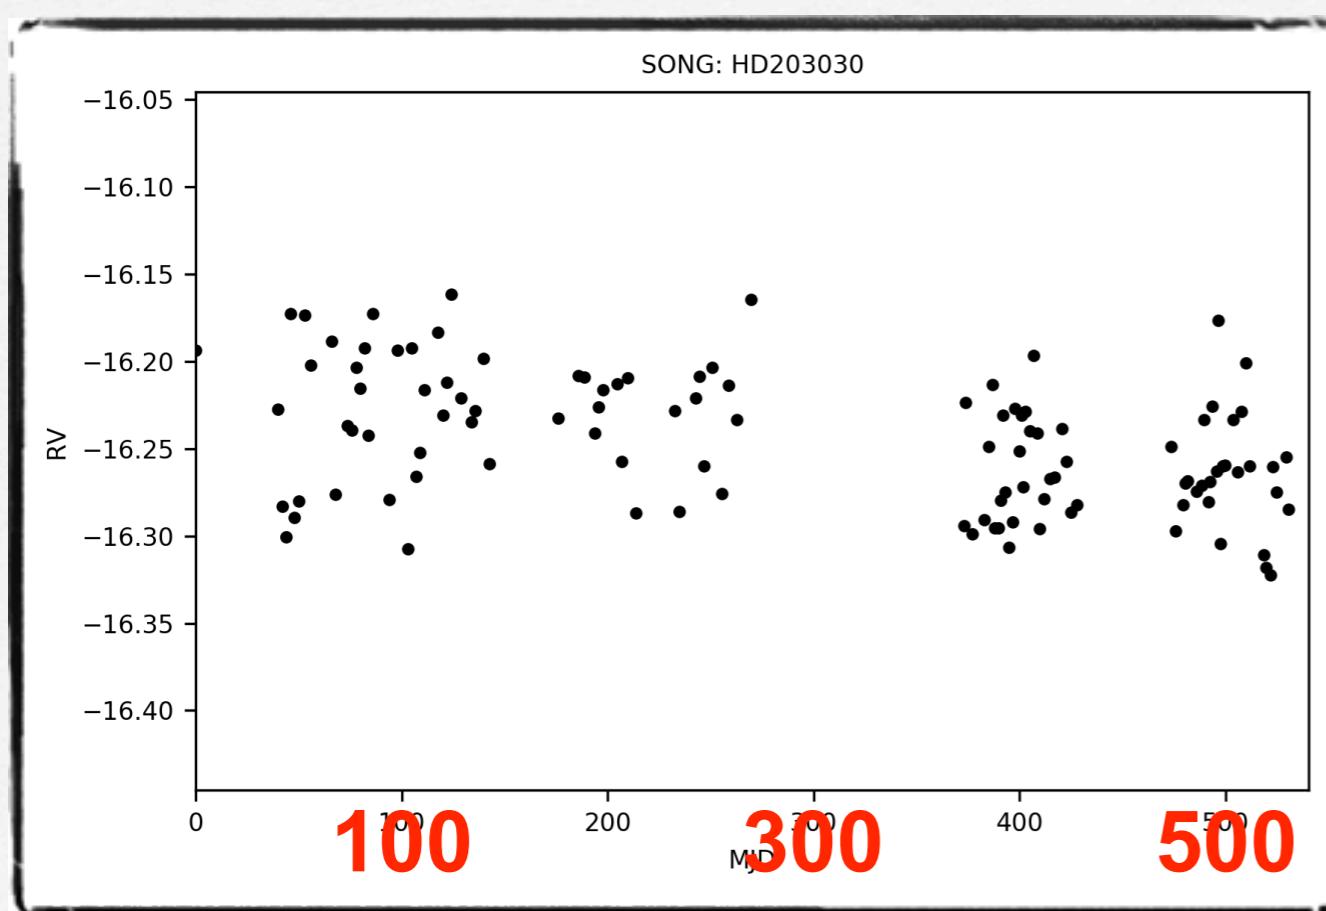

# HD203030

SpT = G8V @ 40.9 pc

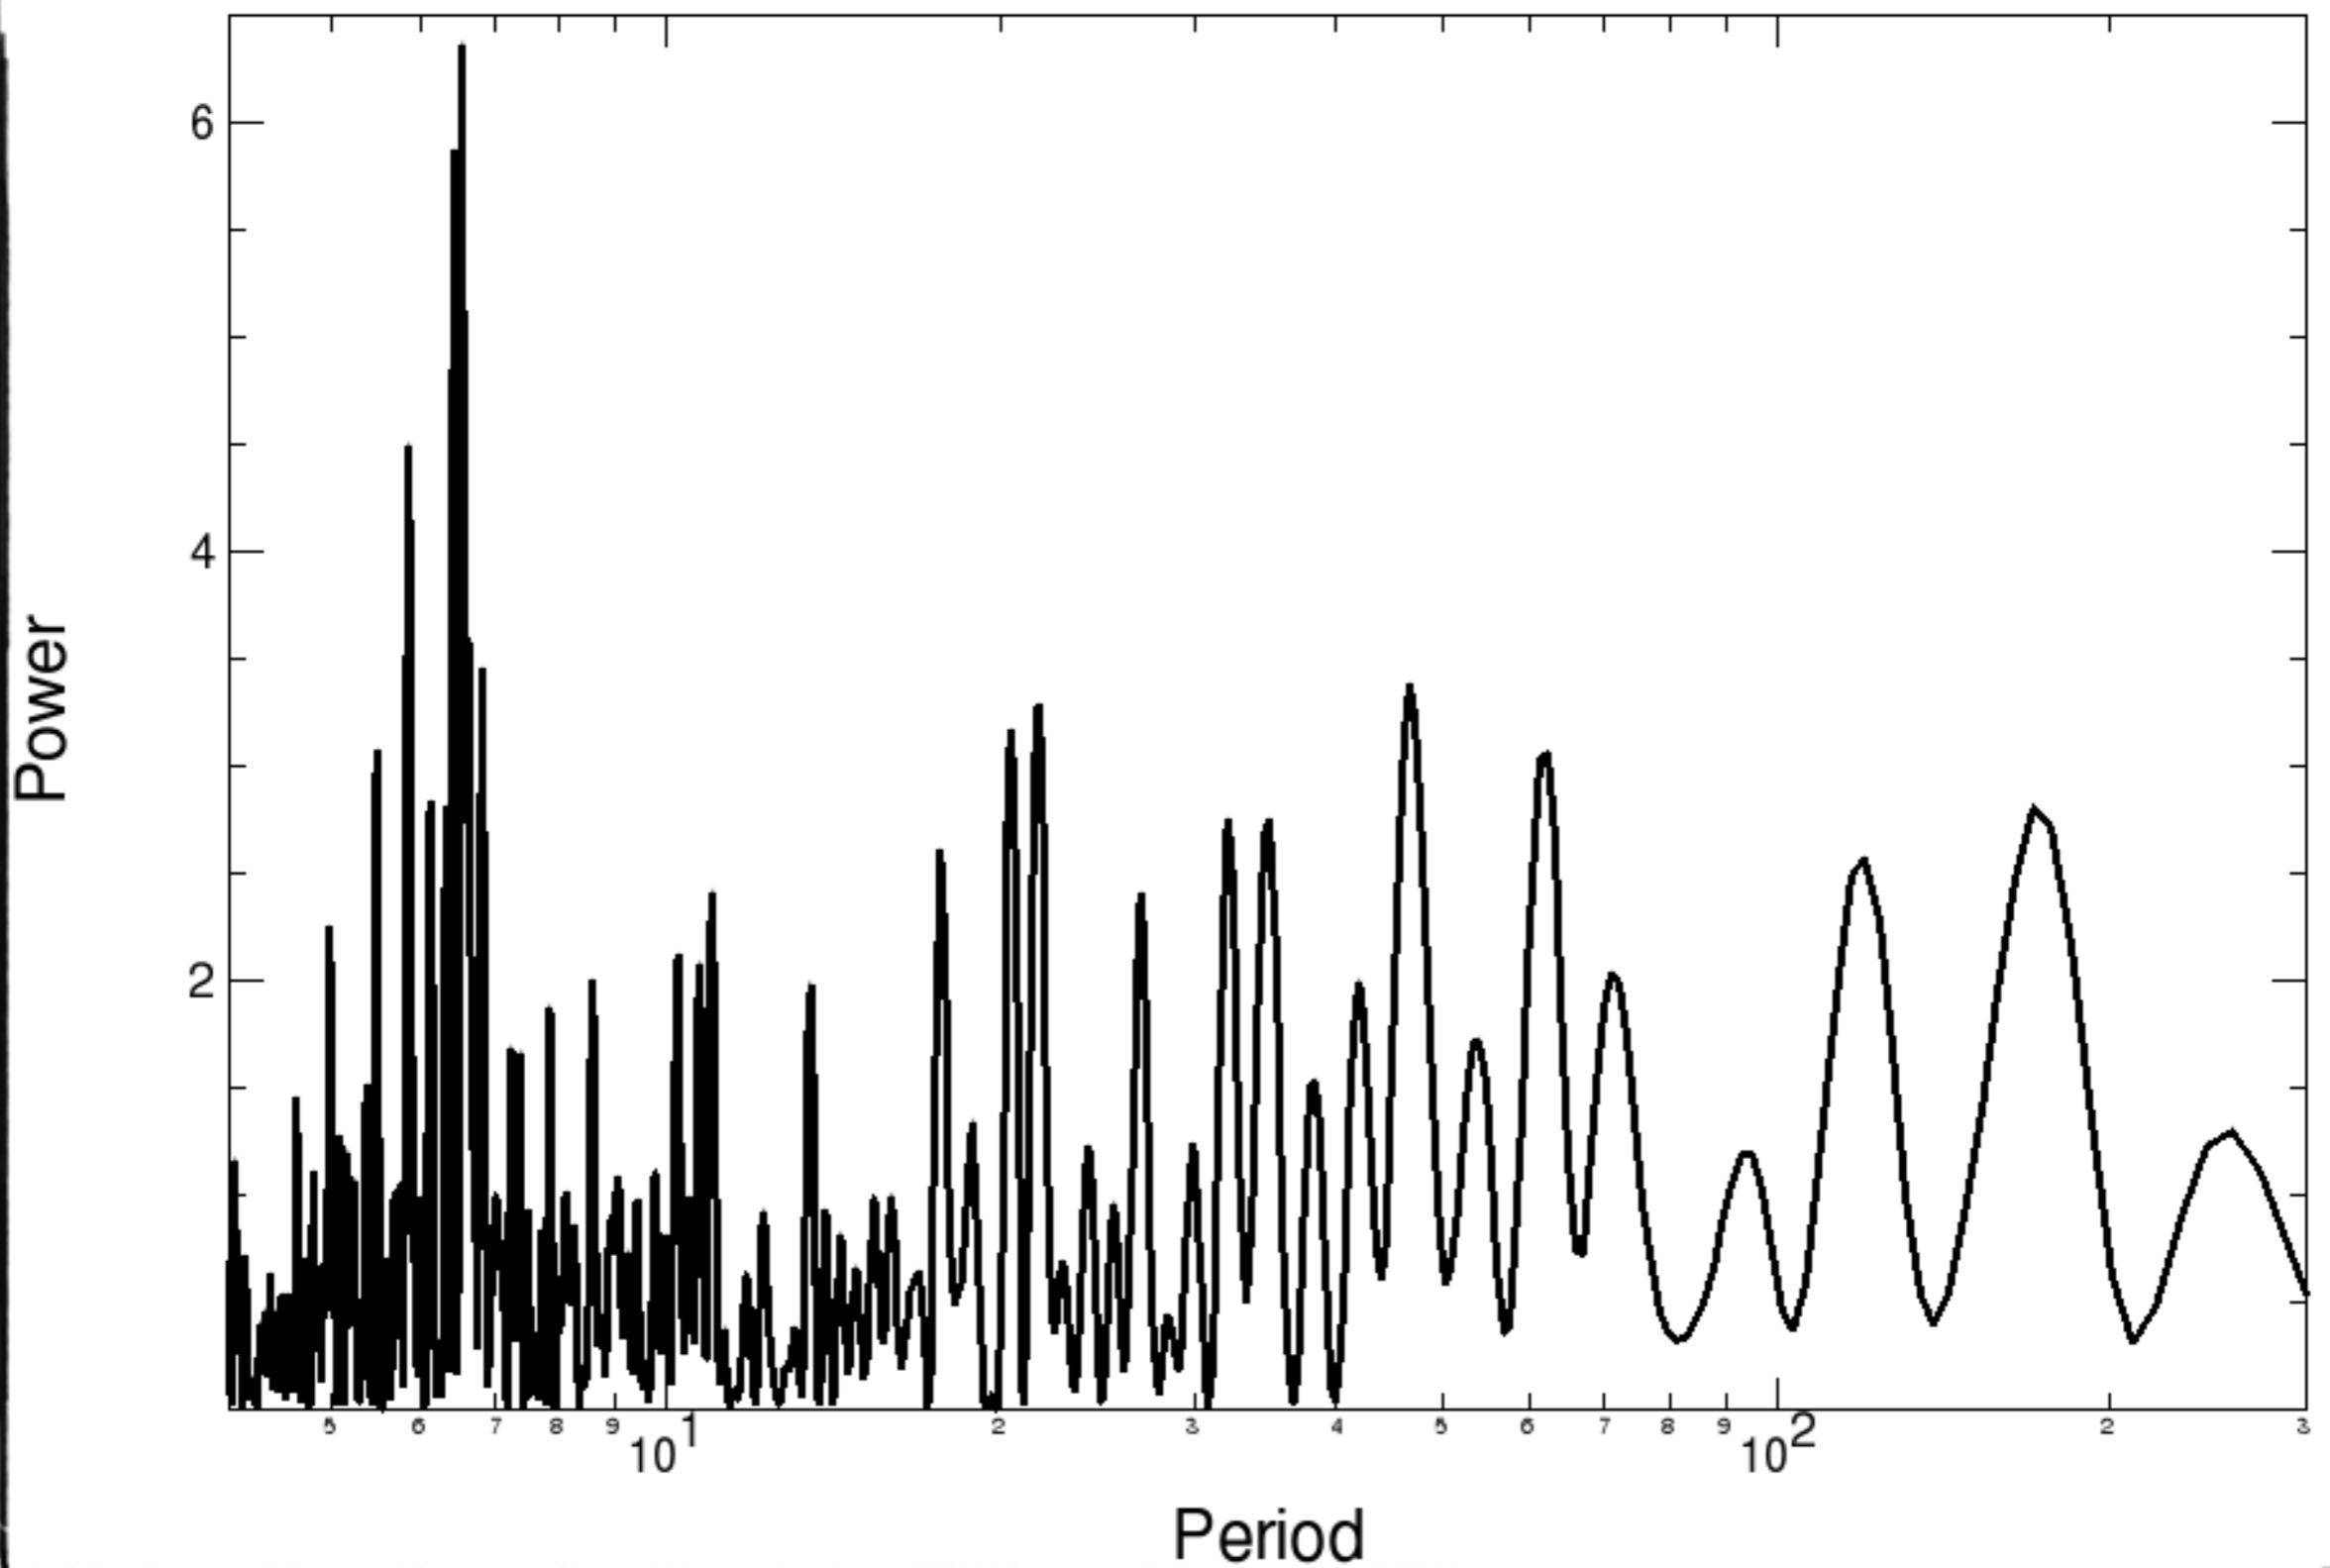

Sep = 487 au

SpT companion = L7.5

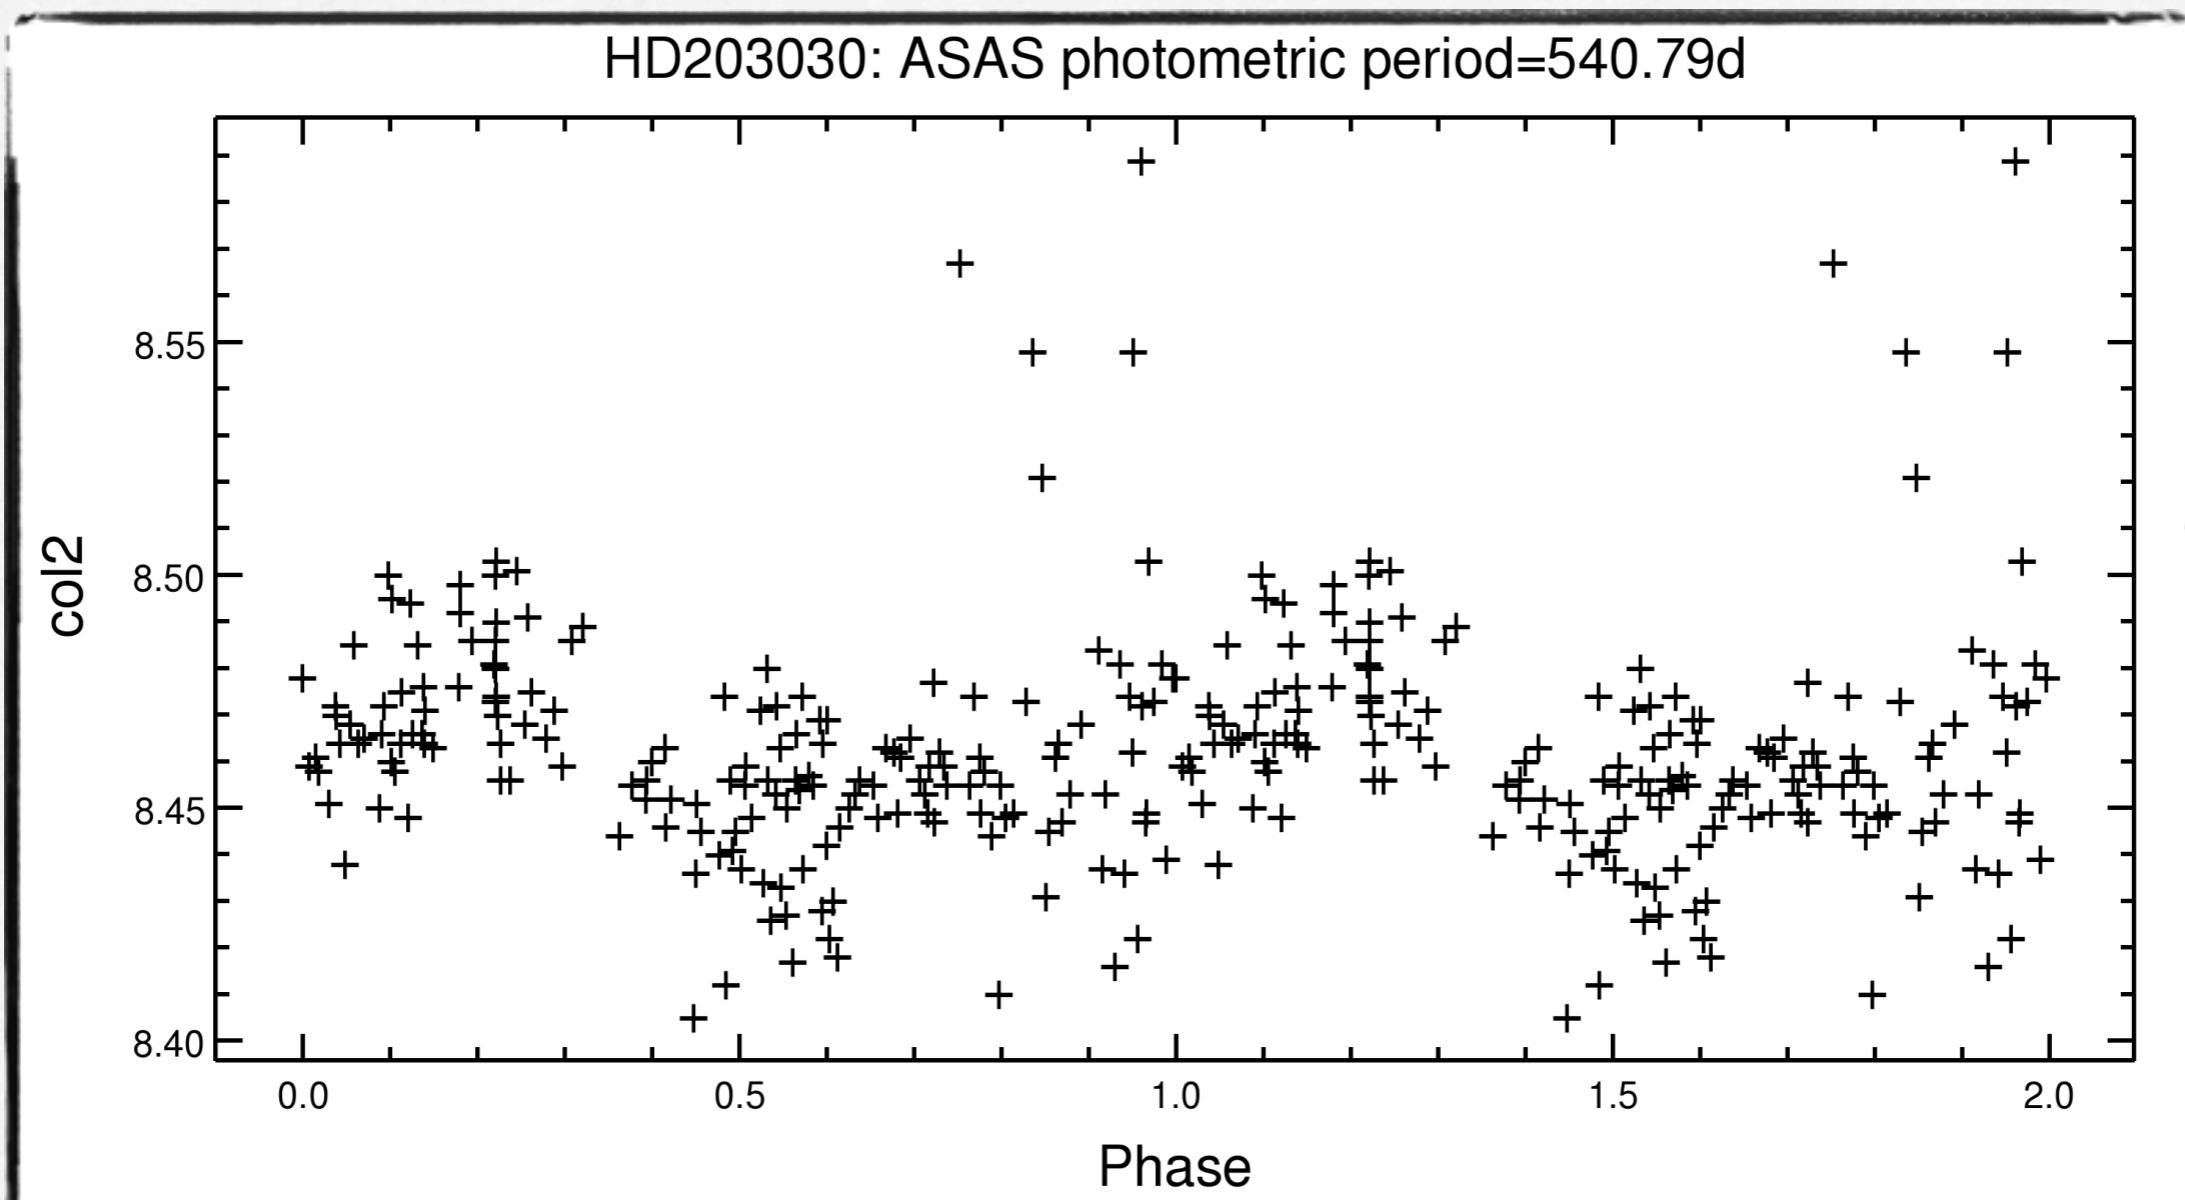

Matches and Hillenbrand 2006

HD203030

# HD203030: magnetic cycle ?

**SpT = G8V @ 40.9 pc    Sep = 487 au    SpT companion = L7.5**

# Summary

Name	Planet(s)	Period
HD3651	V	62d
HD46588	V	22.8d
GJ504	V	85d
HN Peg	X	
HD203030	?	6.5d

**20% of solar-type stars with exoplanets are multiples**

**Frequency of planets around stars with wide substellar companions**

**>21.0-26.3 % vs 10.5% (initial)**

**==> more than in the field**

## Future work

- Correct periodograms for activity: CARMENES
- Longer baseline for current sample: SONG
- Combine with Chinese node to probe shorter periods
- Extend sample to fainter targets: SONG

Thank you for your attention
