

Observations of pre-stellar cores and the origin of the IMF

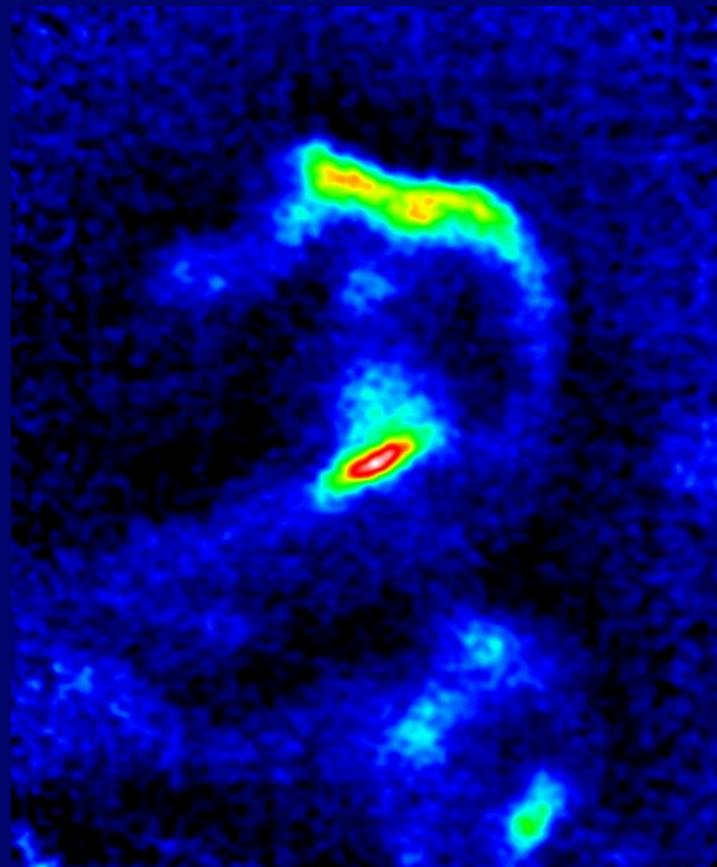

Derek Ward-Thompson
Cardiff University

Tenerife, October 18th, 2010

The initial conditions of low- mass star formation

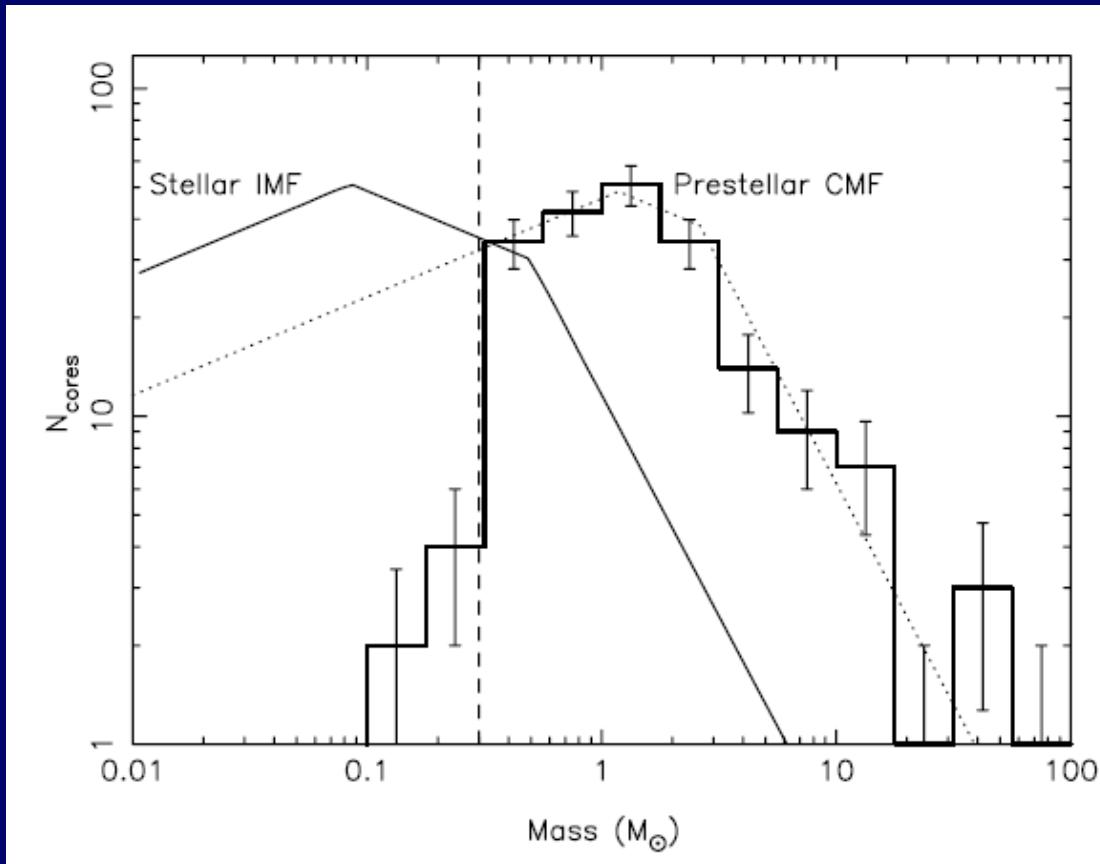

Horsehead Nebula

W-T et al, 2006, MN 369, 1201

Orion core mass function

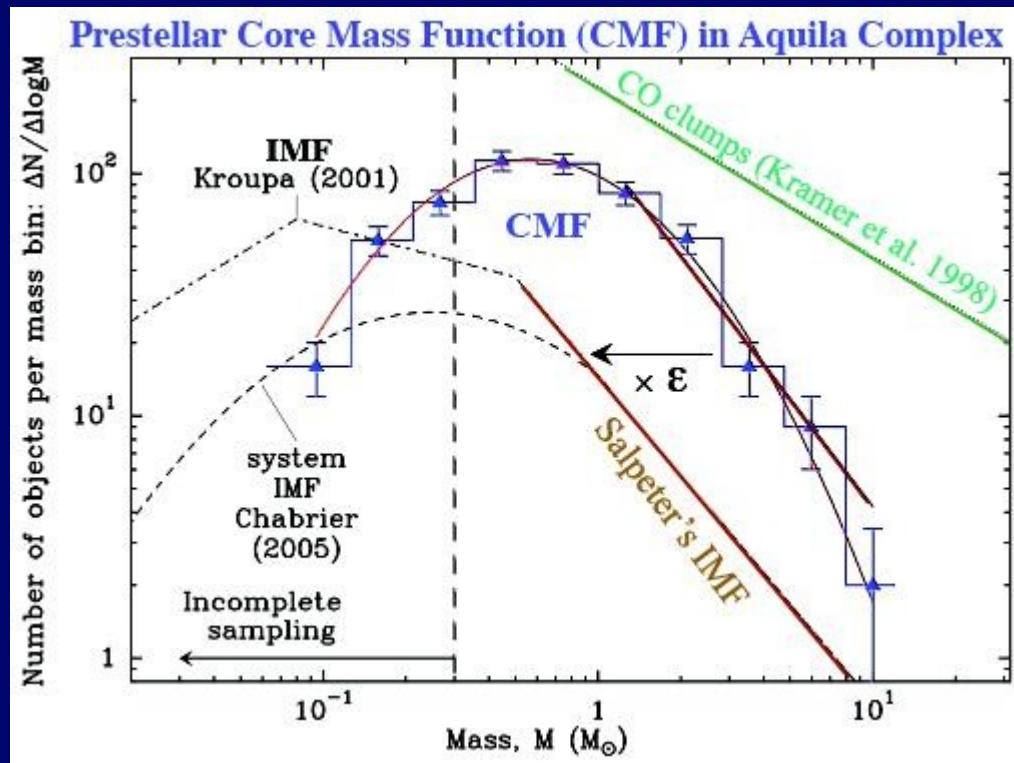

First image from GB survey

Aquila – 3x3deg – R:500, G:170, B:60um – 15 other such regions in survey

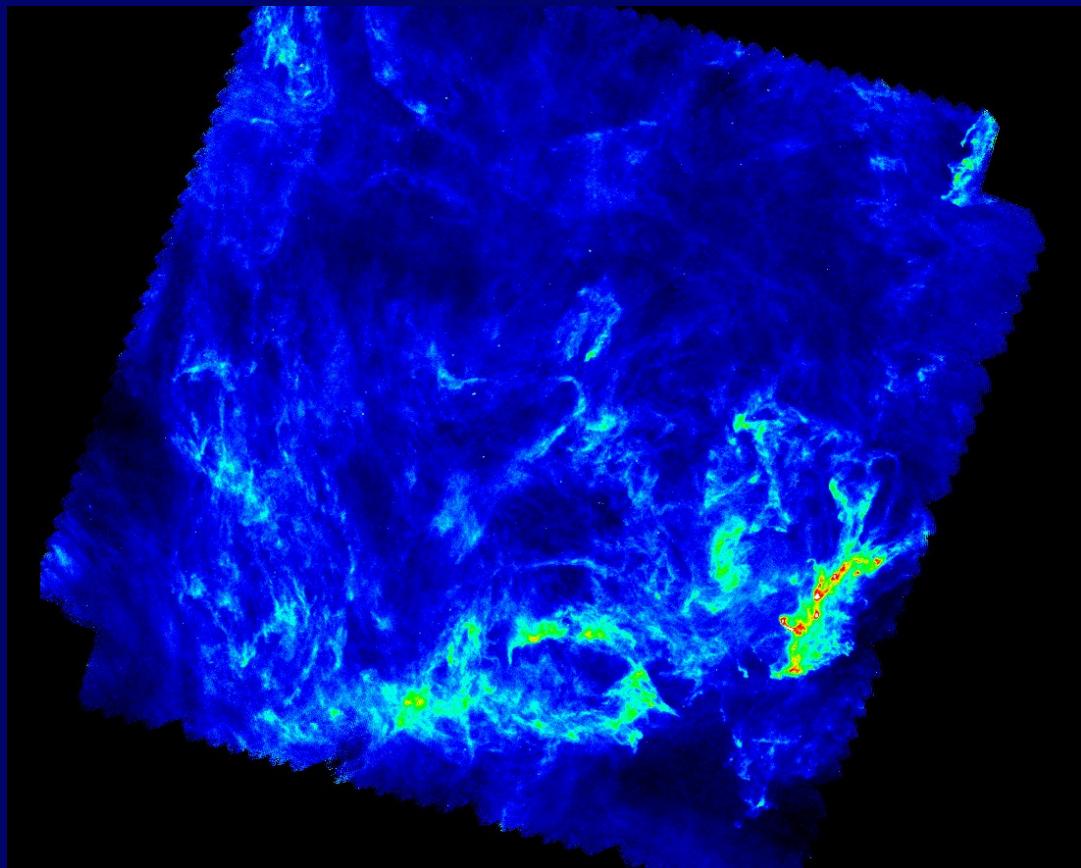

Andre et al 2010

Pre-stellar CMF in Aquila

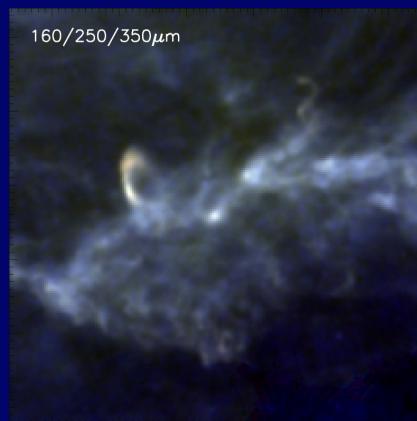

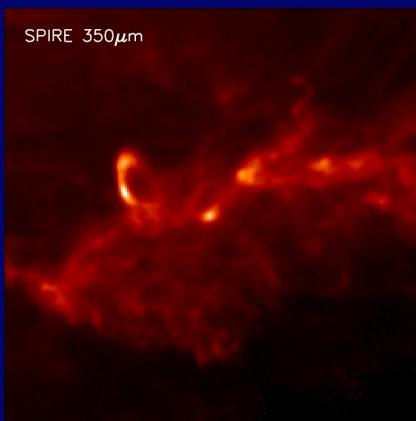

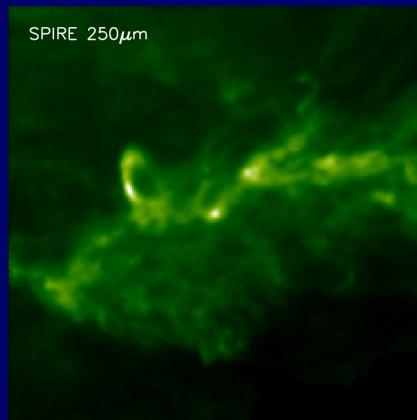

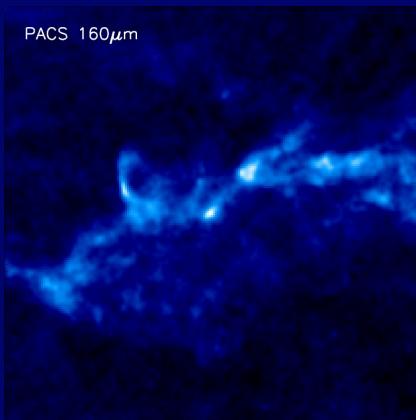

Andre et al 2010

Polaris (SPIRE 250 μ m)

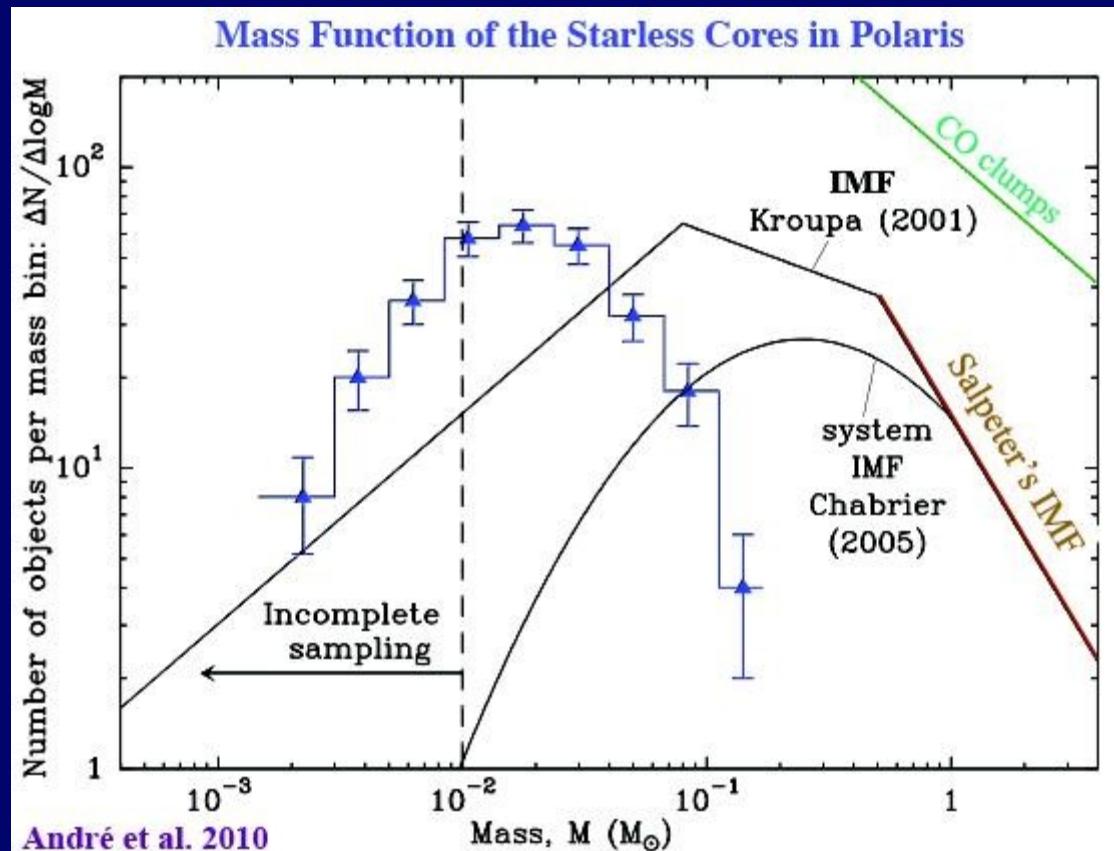

Ward-Thompson et al 2010

MCLD 123 and Loop 1

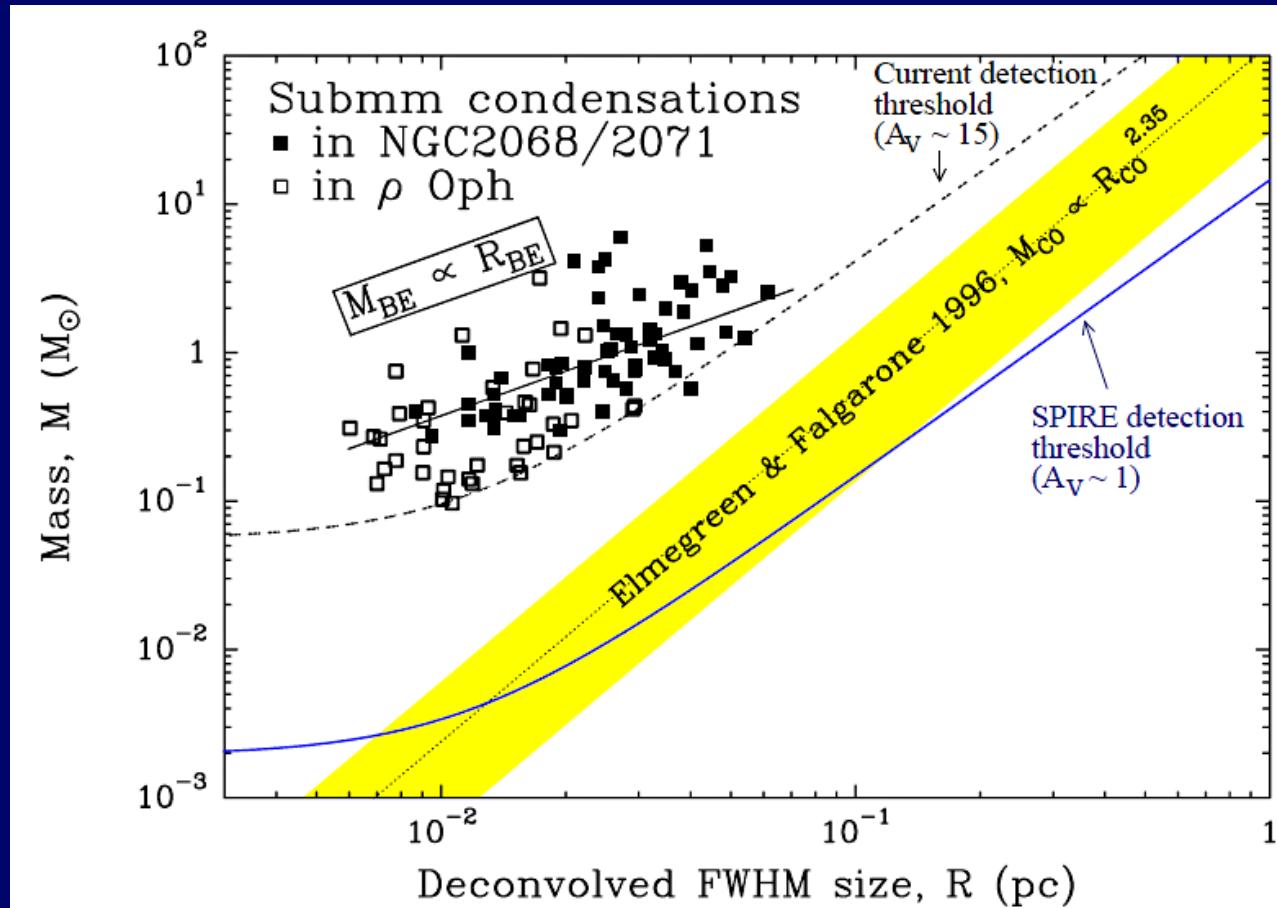

Ward-Thompson et al 2010

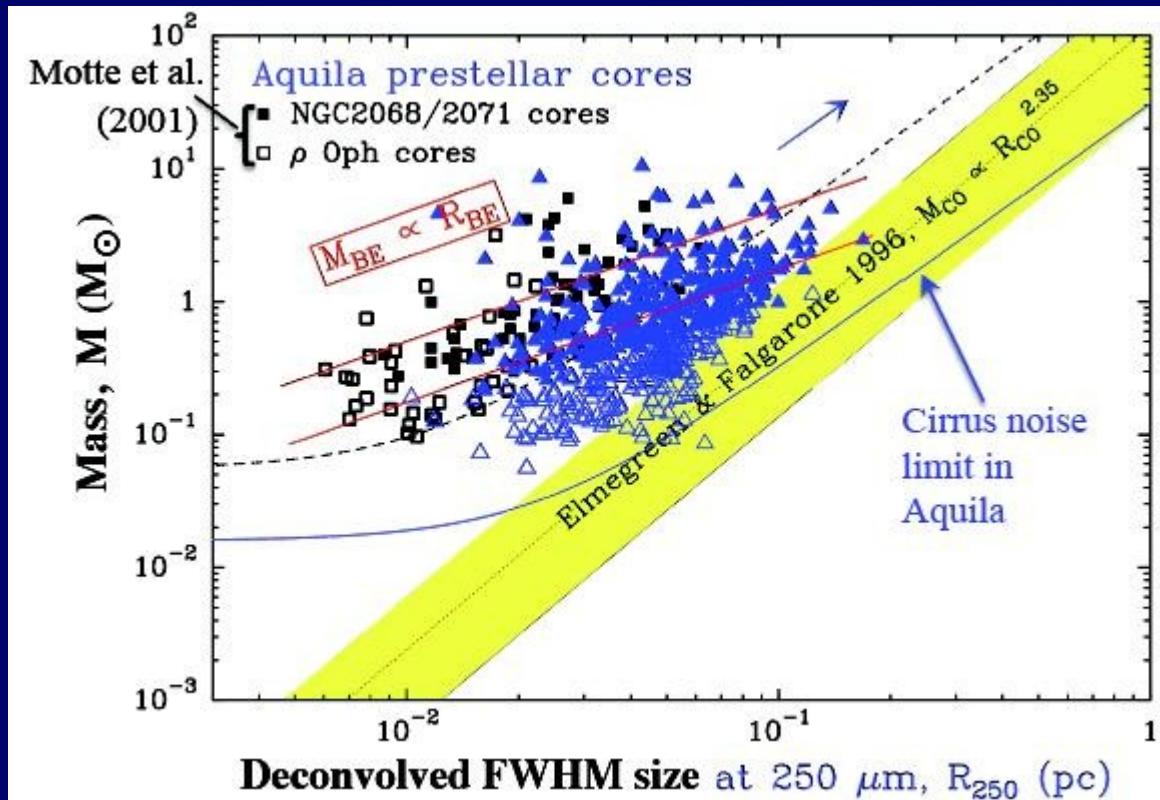

Starless CMF in Polaris

The picture before Herschel

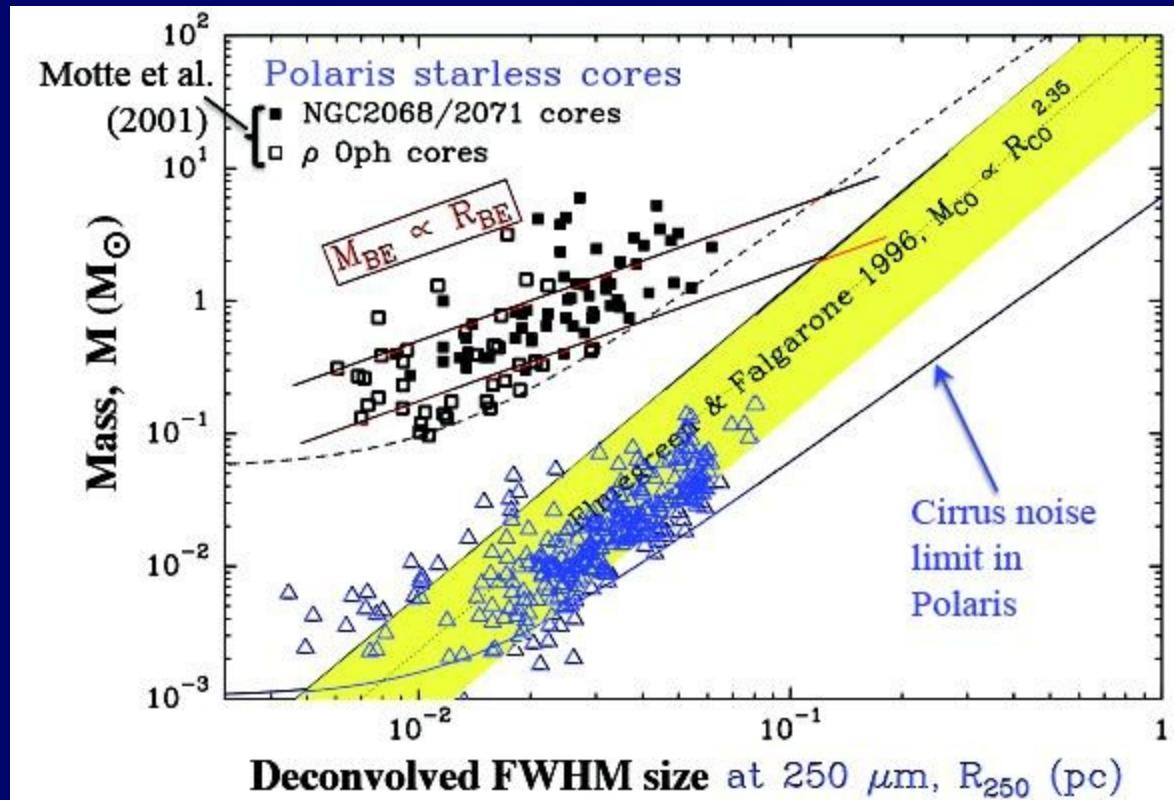

Mass-size relation in Aquila

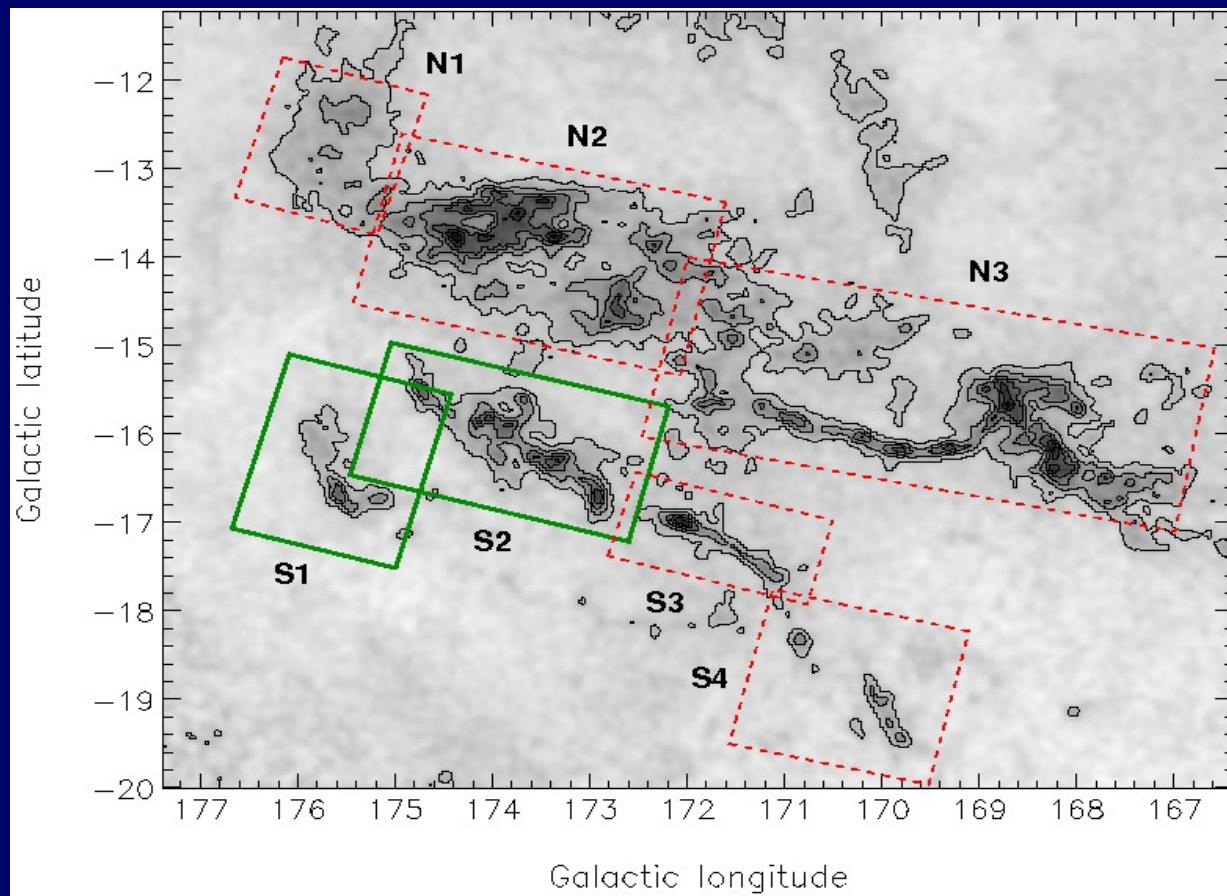

Andre et al 2010

Mass-size relation in Polaris

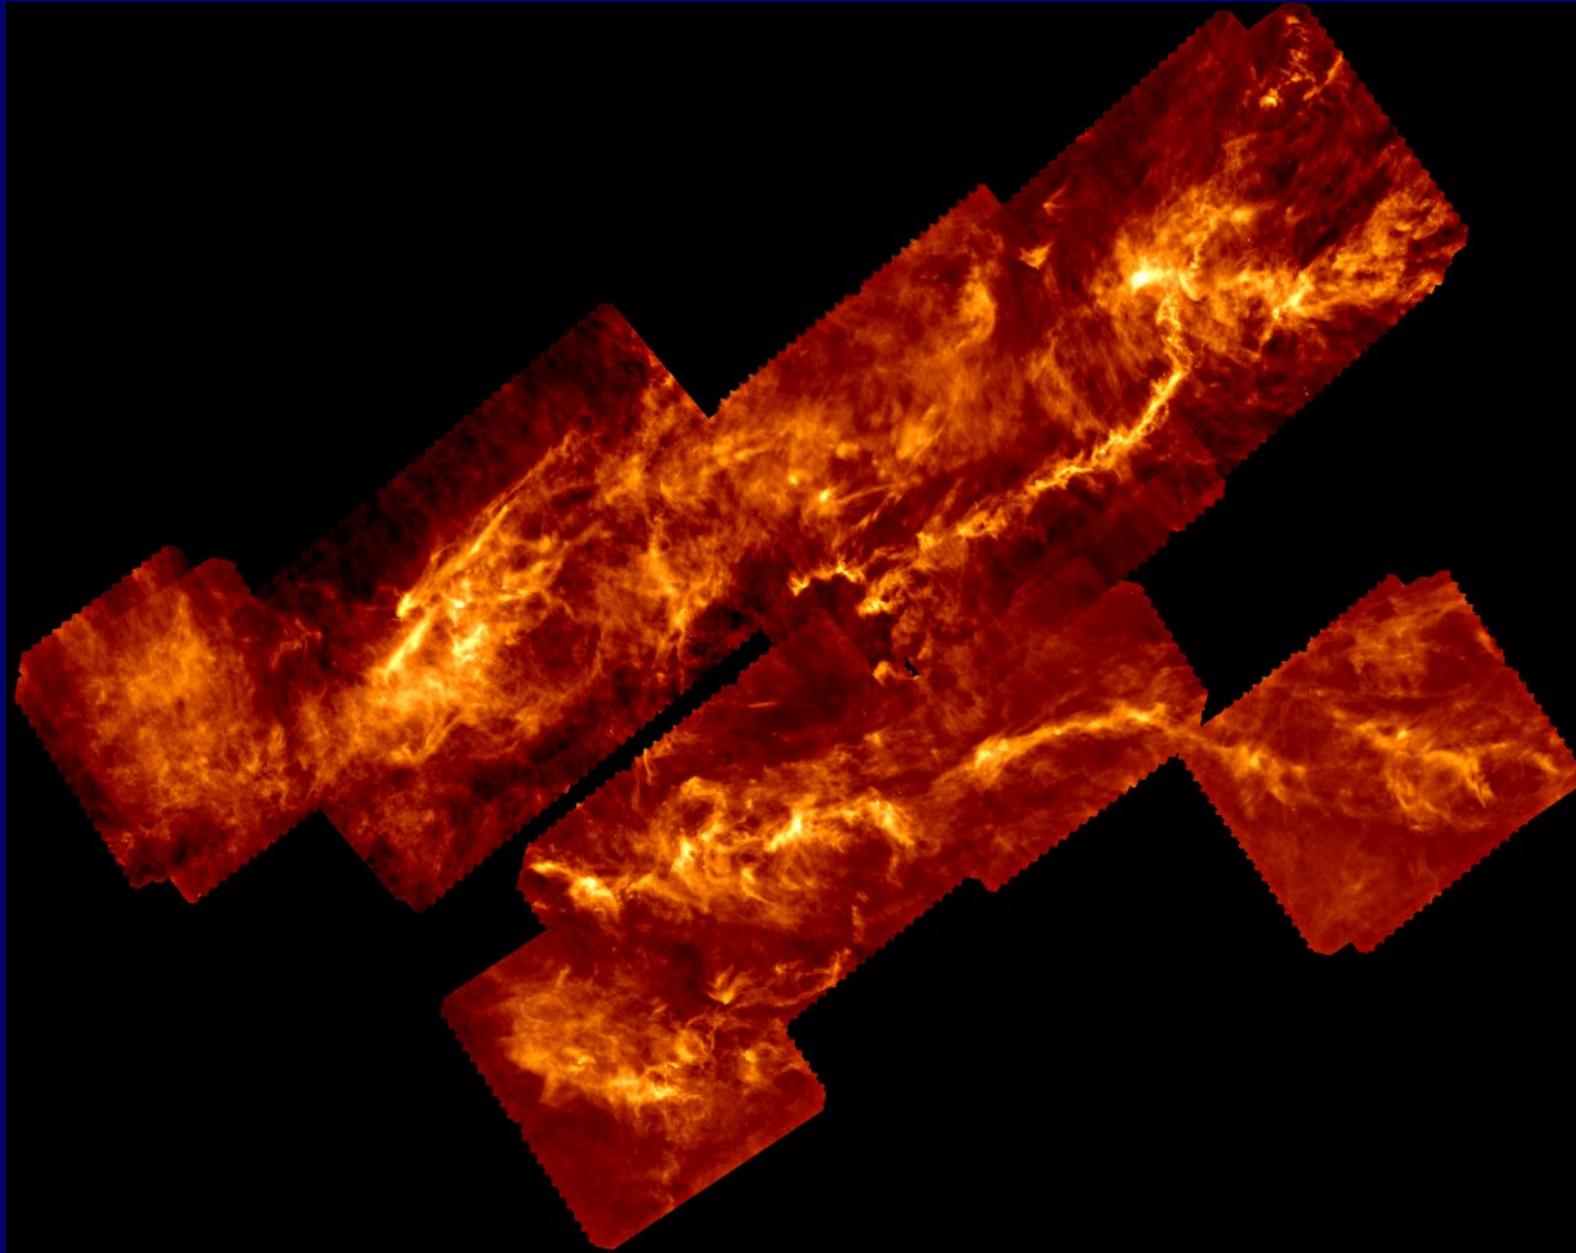

Menchikov et al 2010

Taurus finder chart

Spire 250um of whole of Taurus

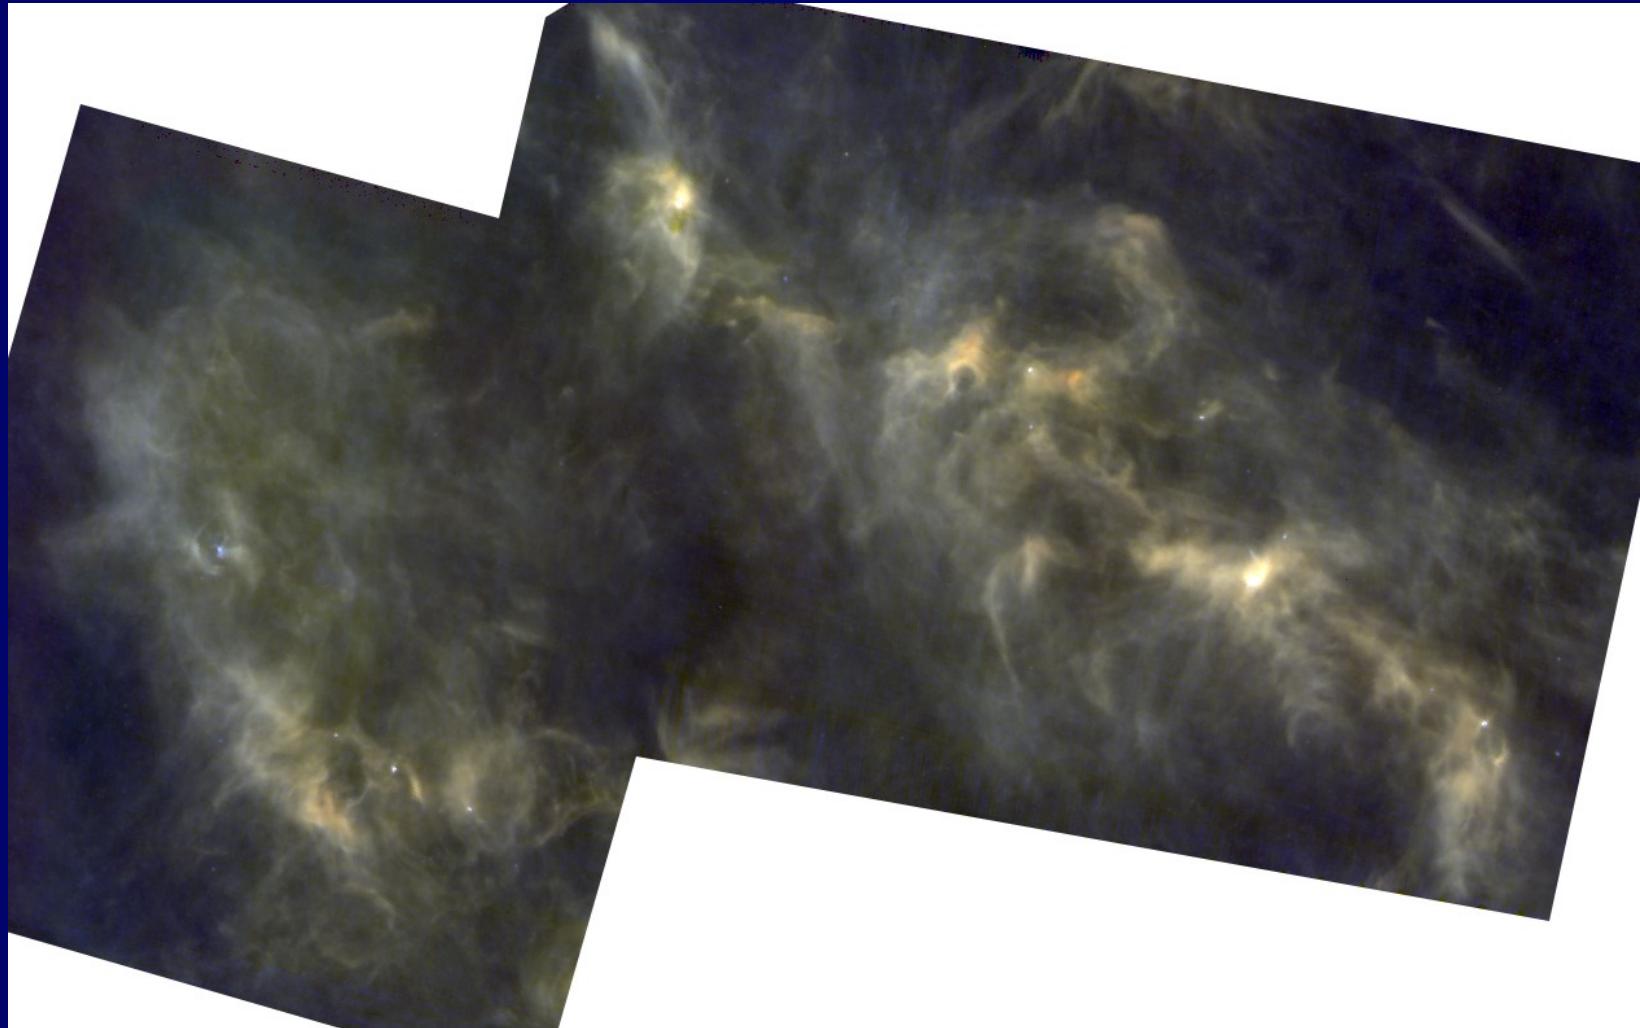

Taurus in the optical (DSS)

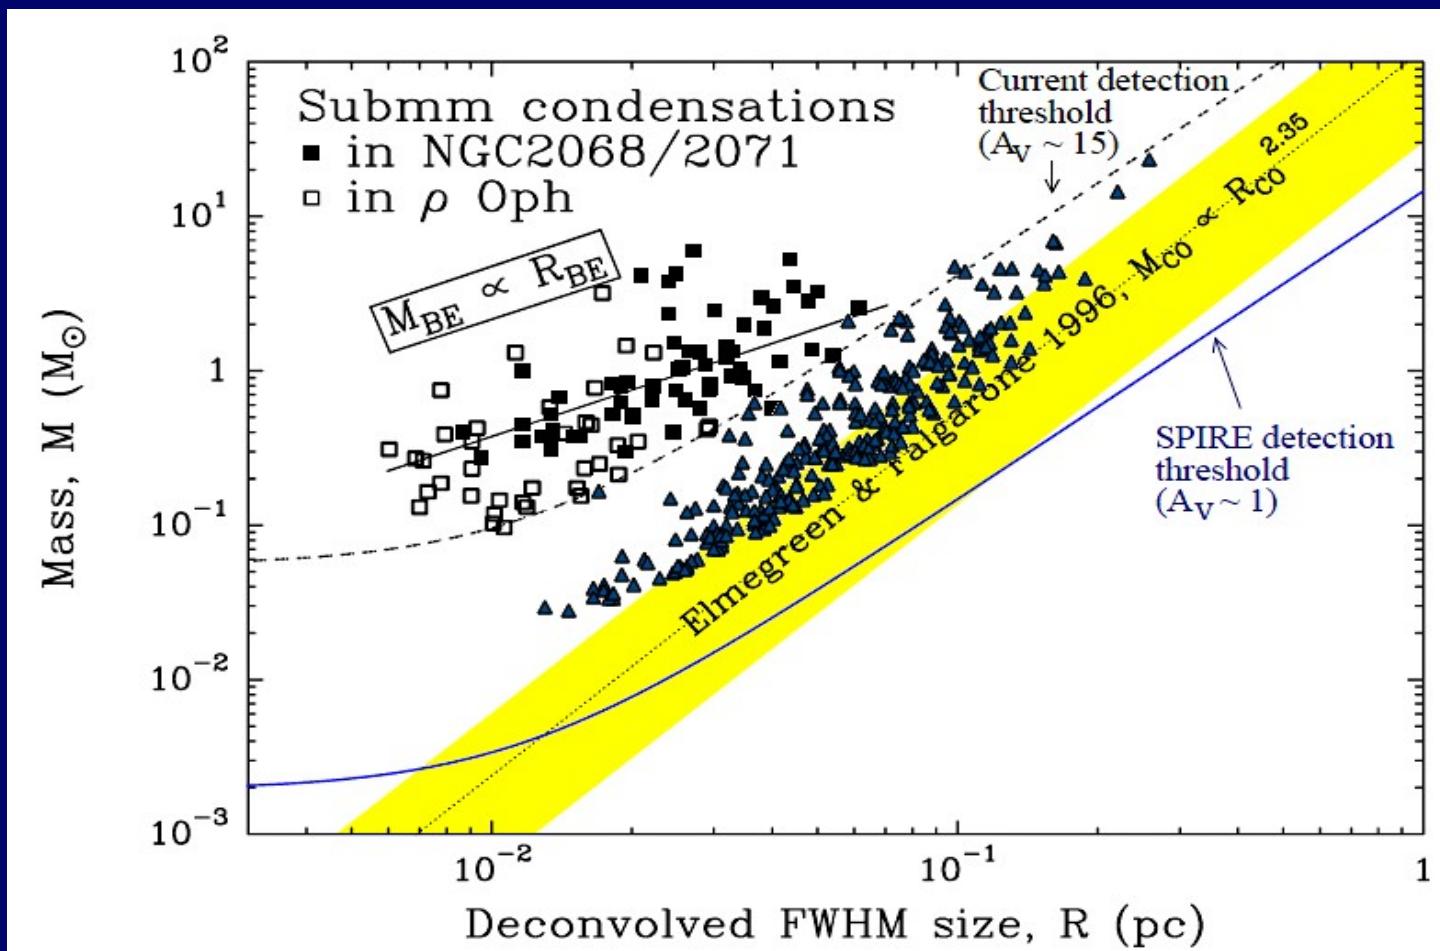

Taurus with Spire 250 overlaid

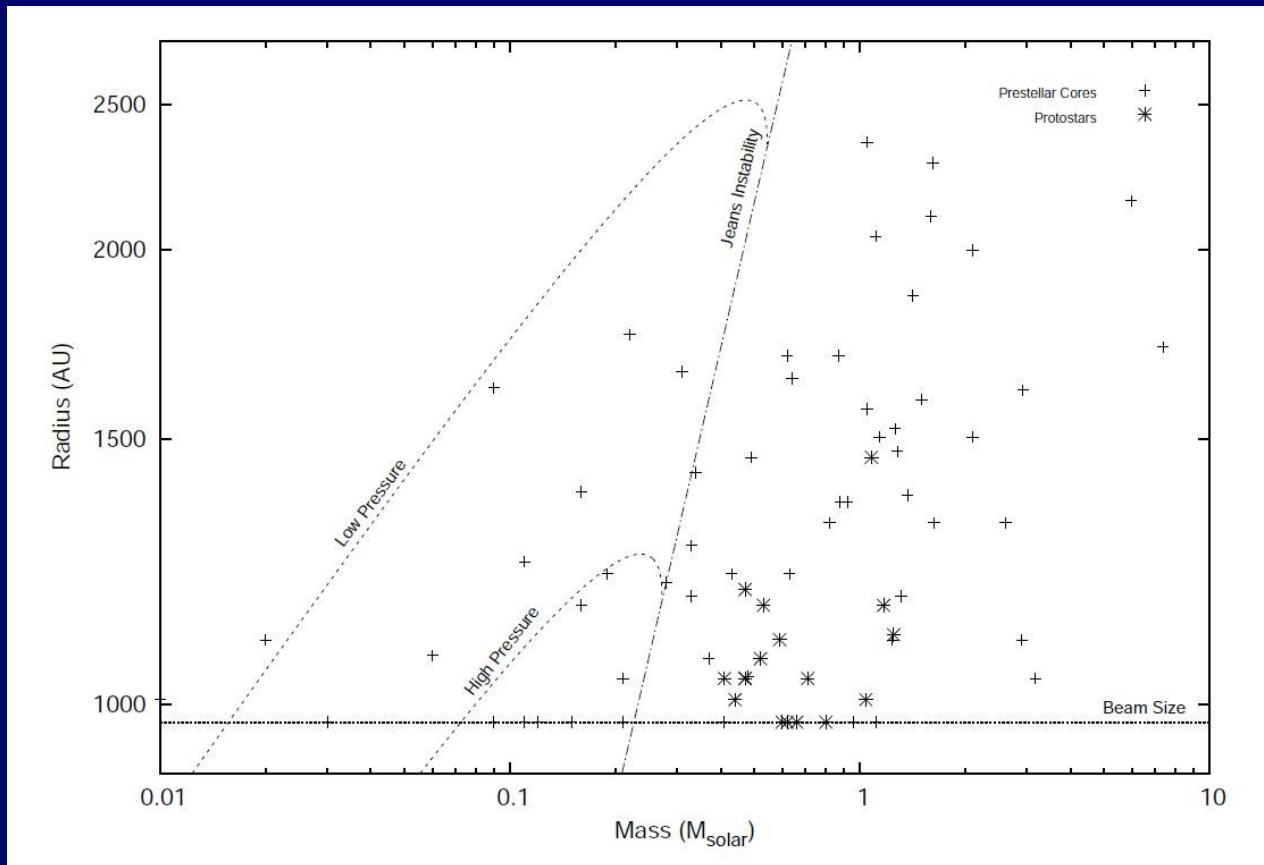

Taurus larger region (b160,g250,r350)

Taurus mass-size relation

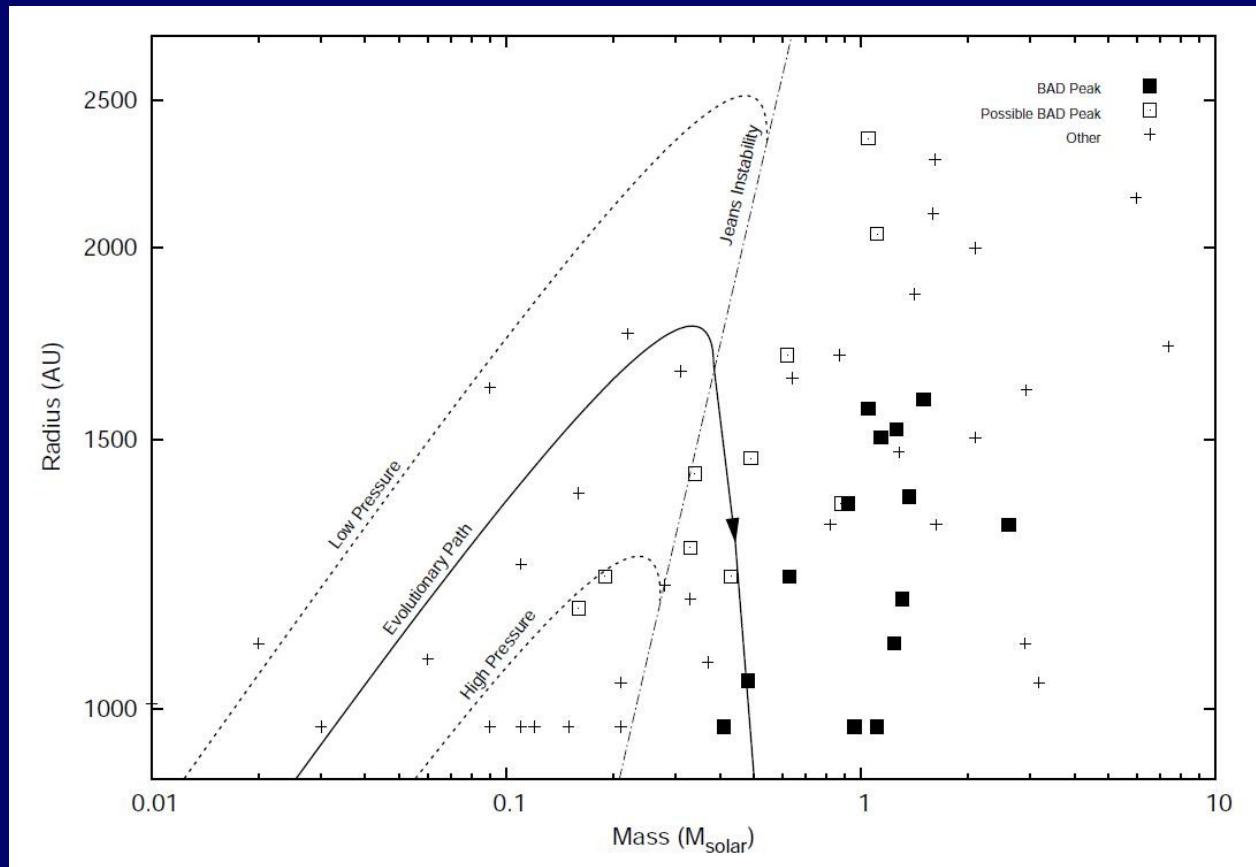

Size-mass in Ophiuchus

Simpson et al 2010

Size-mass (evolution?) in Ophiuchus

Simpson et al (2010)

Orion B North (DSS)

Nutter et al
2010

Orion B North (Scuba2)

Nutter et al
2010

Conclusions

- Stars form in molecular cloud cores
- Core mass function determines IMF
- Need to understand physics of cores
- Need to observe different environments
- Link between starless & pre-stellar cores
- Evolutionary diagram for pre-stellar cores
- Much more to come – watch this space!
